

DIN EN 17084:2020-10 (E)

Railway applications - Fire protection on railway vehicles - Toxicity test of materials and components (includes Corrigendum :2020)

Contents		Page
European foreword		4
Introduction		5
1	Scope	6
2	Normative references	6
3	Terms and definitions	7
4	Principles	7
4.1	Product assessment for toxicity	7
4.1.1	General principles	7
4.1.2	Method 1: Smoke Chamber	8
4.1.3	Method 2: Tube Furnace	8
4.2	Analysis of fire effluents	8
5	Method 1 - Smoke chamber	9
5.1	Gas sampling test apparatus	9
5.2	Calibration	12
5.2.1	General calibrations	12
5.2.2	Chamber leakage test	12
5.2.3	Gas analyser calibration	12
5.3	Test environment	13
5.4	Conditioning of samples	13
5.5	Test specimen preparation	13
5.6	Gas testing	13
5.6.1	Pre-test conditions	13
5.6.2	Testing	13
5.6.3	Operation before each test	14
5.6.4	Operation during a test	14
5.6.5	Operation after each test	15
5.7	Data analysis	16
5.7.1	General	16
5.7.2	Calculation of corrected volume fraction	16
5.7.3	Calculation of time shift	16
5.7.4	Variability of test results	17
6	Method 2 - Tube furnace	17
6.1	Test apparatus	17
6.2	Test environment	17
6.3	Conditioning of samples	17
6.4	Test specimen preparation	17
6.5	Test for gases	17
7	Calculations of CIT	18
7.1	Introduction	18
7.2	Calculation of CITG - Method 1	19
7.3	Calculation of CITNLP - Method 2	20
8	Test report	20

8.1	For all product tests (according to Method 1 or Method 2)	20
8.2	For tests according to Method 1	21
8.3	For tests according to Method 2	22
Annex A (informative) Calculations of FED/FEC		23
A.1	Calculation of FED	23
A.2	Calculation of FEC	23
A.3	Scaling term	24
A.4	Reporting	24
Annex B (informative) Worked Example of Calculation of FED and FEC		25
Annex C (informative) Typical calibration procedure using certified gas cylinder		40
C.1	General	40
C.2	Set up of apparatus	40
C.3	Calibration procedure	41
Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 2008/57/EC aimed to be covered		43
Bibliography		44
