ISO 12856-2:2020 (E)

Railway applications — Polymeric composite sleepers, bearers and transoms — Part 2: Product testing

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

5 Product characteristics

5.1 General
5.2 Bending resistance
5.2.1 Test arrangements
5.2.1.1 Rail seat section for the positive load test for sleepers
5.2.1.2 Centre section for the negative load test for sleepers
5.2.1.3 Centre section for the positive load test for sleepers
5.2.1.4 Rail seat section for the positive load test for bearers
5.2.1.5 Centre section for the negative load test for bearers
5.2.1.6 Centre section for the positive load test for bearers
5.2.1.7 Centre section for the load test for transom
5.2.2 Initial reference test loads
5.2.2.1 Initial reference test loads for sleepers
5.2.2.2 Initial reference test loads for bearers
5.2.2.3 Initial reference test load for transoms
5.2.3 Test procedures at the centre section for the negative bending moments
5.2.3.1 Stiffness at the centre section
5.2.3.2 Fatigue test and ultimate load at the centre section for negative bending moments
5.2.3.3 Permanent deformation test at the centre section for negative bending moments
5.2.3.4 Strength test at the centre section for negative bending moments
5.2.4 Test procedures at the centre section for the positive bending moments
5.2.4.1 Stiffness at the centre section
5.2.4.2 Fatigue test and ultimate load at the centre section for positive bending moments
5.2.4.3 Strength test at the centre section for positive bending moments
5.2.5 Test procedures at the rail seat
5.2.5.1 Stiffness at the rail seat
5.2.5.2 Fatigue test at the rail seat
5.2.5.3 Strength at the rail seat
5.3 Tests with geometric ballast plate (GBP) or with flat plate (FP) at rail seat
5.3.1 Stiffness with GBP or with FP at rail seat
5.3.2 Compression test with GBP or with FP at rail seat
5.4 Thermal expansion
5.4.1 Principle
5.4.2 Apparatus
5.4.2.1 Climatic chamber
5.4.2.2 Thermal sensor
5.4.2.3 Test specimen
5.4.2.4 Instruments for the control of dimensions
5.4.3 Procedure
5.5 Interface between the rail and the sleeper
5.5.1 Permanent deformation of screw/insert as a function of temperature

5.5.1.1 General
5.5.1.2 Apparatus
5.5.1.2.1 Climatic chamber
5.5.1.2.2 Element of sleeper
5.5.1.3 Procedure
5.5.2 Fastening system
5.5.3 Electrical resistance
5.5.4 Screw, spike, cast-in and glued-in fastening components
5.6 Fire
5.7 System Test

Annex A (informative) Geometric ballast plate (GBP)

A.1 Design of the GBP
A.2 Material of GBP

Annex B (informative) Test procedures for stiffness measurement of polymeric composite sleeper or bearer with GBP

B.1 General
B.2 Static test procedure
B.2.1 Principle
B.2.2 Apparatus
B.2.3 Procedure
B.2.4 Test report
B.3 Low frequency dynamic test procedure
B.3.1 Principle
B.3.2 Apparatus
B.3.3 Procedure
B.3.4 Test report

Annex C (informative) Test procedures for stiffness measurement of polymeric composite sleeper with flat plate (FP)

Annex D (informative) System test

D.1 Principle
D.2 Apparatus
D.3 Procedure
D.4 Test report
