DIN EN 15528:2022-02 (E)

Railway applications - Line categories for managing the interface between load limits of vehicles and infrastructure

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 6

3 Terms, definitions, symbols and abbreviated terms 6

4 Classification system 10

5 Classification of infrastructure 12

6 Categorization of vehicles 14

7 Static compatibility of the interface between vehicle and infrastructure 22

Annex A (normative) Reference wagons and load models representing the line categories 24

Annex B (informative) Flow chart: Classification of infrastructure and categorization of vehicles 29

Annex C (informative) Speeds which do not require dynamic compatibility checks 30

Annex D (informative) Methods used to determine the load carrying capacity of existing structures 32

Annex E (informative) Application of line classification result 33

Annex F (informative) Comparison of RA classification with line categories 35

Annex G (informative) Example of calculation methodology 36

Annex H (informative) Maximum permissible axle load P - Wagons with two 2-axle bogies 42

Annex I (informative) Maximum permissible axle load P - Wagons with two 3-axle bogies 45

Annex J (informative) Line categories of 6-axle locomotives 48

Annex K (informative) L4 locomotive classes (4-axle locomotives) 49

Annex L (informative) L6 locomotive classes (6-axle locomotives) 50

Annex M (informative) Weight note for locomotives 52

Annex N (informative) Geometric train parameters 55

Annex O (informative) Categorization of MUs by parameter check Identification of line category by maximum axle load 57

Annex P (informative) Guidance for tabling light rail MUs into line category a10, a12 or a14 64
