DIN EN 14752:2022-03 (E)

Railway applications - Bodyside entrance systems for rolling stock (includes Amendment :2021)

Contents

Page

European foreword 6

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions 9

4 Constructional requirements 13
4.1 Door design 13
4.1.1 Door throughway design 13
4.1.2 Steps 15
4.1.3 Track level access 17
4.1.4 Relative position of the step edge 17
4.1.5 Train surfing 18
4.1.6 Door windows 18
4.1.7 Design of body side entrance doors used for accessing driver's cabs 19
4.1.8 Water drainage 19
4.2 Mechanical strength 19
4.2.1 Door mechanical strength 19
4.2.2 Step(s) mechanical strength 21
4.3 Local door control devices 22
4.3.1 Door buttons 22
4.3.2 Emergency egress device 23
4.3.3 Access device 24
4.4 Labels/warning signs 25
4.5 Interfaces with the vehicle 25
4.5.1 Electric and pneumatic power supplies 25
4.5.2 Mechanical interface with the vehicle 25
4.6 Other requirements 25
4.6.1 Fire protection 25
4.6.2 Insulation 25
4.7 Electronic equipment 26
4.7.1 Hardware 26
4.7.2 Software for electronic door control systems 26
4.8 Reliability, availability, maintainability, safety (RAMS) 26
4.9 Protection against electrical hazards 27
4.10 Environmental conditions 27
4.10.1 Weather 27
4.10.2 Water tightness 27
4.10.3 Pressure tightness 27
4.11 Manual and semi-automatic ramps, bridging plates 28

5 Operational requirements 28
5.1 Door control 28
5.1.1 General 28
5.1.2 Release doors and steps 28
5.1.3 Interlocking of released doors 28
5.1.4 Single point failure 28

5.1.5 Mechanical locking 28
5.1.6 Out-of-service devices 29
5.1.7 Isolation for maintenance purposes 30
5.2 Closing and opening conditions 31
5.2.1 Safety during closing 31
5.2.2 Entrance system closed proving 42
5.3 Opening conditions 43
5.3.1 Safety during opening 43
5.3.2 Limitation of opening 43
5.4 Moveable step obstacle detection 43
5.4.1 General 43
5.4.2 Steps outside the vehicle 43
5.4.3 Steps inside the vehicles 43
5.5 Emergency operation 44
5.5.1 Emergency egress 44
5.5.2 Emergency windows in access doors 47
5.5.3 Access device 47
5.5.4 Powering up 48
5.6 Other requirements 48
5.6.1 Passenger access door area illumination 48
5.6.2 Status indication 48

6 Categories of tests 48
6.1 General 48
6.2 Type tests 48
6.3 Routine tests during manufacture 49
6.4 Routine test on the fully assembled vehicle/train consist 49

7 Documentation related to installation and maintenance of the entrance system 49

Annex A (normative) Passenger interface devices 50

A.1 Purpose 50
A.2 Design of door buttons 50
A.3 Labels on or near door buttons 52
A.4 Recommended emergency egress device 53
A.5 Sample of labels 53

Annex B (normative) Water test procedure 54

B.1 Purpose 54
B.2 Test arrangement 54
B.3 Test procedure 55
B.4 Test decision 56

Annex C (normative) Specification and testing of the pressure tightness of door 58

C.1 Purpose 58
C.2 Calculation - Flowchart 58
C.3 Example of pressure tightness requirement specification 58
C.4 Pressure tightness testing 59
C.4.1 General 59
C.4.1.1 Sealing surface 59
C.4.1.2 Leakage surface 59
C.4.1.3 Equivalent leakage surface (ELS) 59
C.4.1.4 Approximate equivalent leakage surface 59
C.4.2 Variable pressure measurement method 59
C.4.2.1 Principle of measurement 59
C.4.2.2 Modelling the phenomenon 60
C.4.2.2.1 Symbols 60
C.4.2.2.2 Modelling 60
C.4.2.2.3 Equivalent leakage surface 61

C.4.3 Variant: Constant pressure method of measurement 61
C.4.3.1 General 61
C.4.3.2 Principle: Equipment forms a chamber 62
C.4.3.3 Modelling the phenomenon 62

Annex D (normative) Requirements for measuring the closing forces of power-operated doors 63

D.1 General 63
D.2 Terms and definitions 63
D.3 Measurements 64
D.3.1 Conditions of measurement 64
D.3.2 Measurement points 64
D.3.3 Measuring method 64

Annex E (normative) Test plan 66

Annex F (normative) Load requirements for doors due to aerodynamic loads on passenger trains 68

Annex G (informative) Clauses in this European Standard requiring clarification in the technical specification 69

Annex H (normative) RIC-KEY 71

Annex I (informative) Calculation of kinetic energy 72

Annex J (informative) Non-contact obstacle detection 78

J.1 General 78
J.2 Light barrier 78
J.3 Step sensors for external steps 78
J.4 Area monitoring systems 78
J.4.1 Arrangement of area monitoring system 78
J.4.2 Testing of area monitoring system 81
J.4.2.1 Test object 81
J.4.2.2 Open door (closing is not yet triggered by door control) 82
J.4.2.2.1 Static 82
J.4.2.2.2 Dynamic 82
J.4.2.3 Automatically closing door (door leaf is moving) 82
J.4.2.3.1 Static 82
J.4.2.3.2 Dynamic 82
