|-------------------------|--|-------------|
| European foreword ..... |  | 6           |
| Introduction .....      |  | 7           |
| 1                       | Scope .....  | 8           |
| 2                       | Normative references .....   | 8           |
| 3                       | Terms and definitions .....  | 8           |
| 4                       | Symbols and abbreviations .....  | 9           |
| 5                       | Methods and requirements to assess cross wind stability of vehicles .....                          | 22          |
| 5.1                     | General .....  | 22          |
| 5.2                     | Applicability of cross wind methodologies for rolling stock assessment purposes .....              | 23          |
| 5.3                     | Determination of aerodynamic coefficients .....  | 25          |
| 5.3.1                   | General .....  | 25          |
| 5.3.2                   | Predictive formula .....   | 25          |
| 5.3.3                   | Simulations by Computational Fluid Dynamics (CFD) .....  | 26          |
| 5.3.4                   | Reduced-scale wind tunnel measurements .....   | 29          |
| 5.4                     | Determination of wheel unloading due to cross winds .....  | 34          |
| 5.4.1                   | General .....  | 34          |
| 5.4.2                   | Simple method .....  | 34          |
| 5.4.3                   | Advanced quasi-static method .....   | 37          |
| 5.4.4                   | Time-dependent MBS method using a Chinese hat wind scenario .....                                  | 40          |
| 5.5                     | Presentation form of characteristic wind curves (CWCs) .....                                       | 47          |
| 5.5.1                   | General .....  | 47          |
| 5.5.2                   | CWC presentation form for passenger vehicles and locomotives .....                                 | 48          |
| 5.5.3                   | CWC presentation form for freight wagons .....   | 49          |
| 5.6                     | Requirements .....   | 50          |
| 5.6.1                   | Requirements for passenger vehicles and locomotives running at 250 km/h $v_{max} < 360$ km/h ..... | 50          |
| 5.6.2                   | Requirements for passenger vehicles and locomotives running 140 km/h $< v_{max} < 250$ km/h .....  | 53          |
| 5.6.3                   | Requirements for freight wagons .....  | 53          |
| 6                       | Method to acquire the needed railway line data .....   | 54          |
| 6.1                     | General .....  | 54          |
| 6.2                     | Presentation form of railway line data .....   | 54          |
| 6.2.1                   | General .....  | 54          |
| 6.2.2                   | Plan profile .....   | 54          |
| 6.2.3                   | Vertical profile .....   | 55          |
| 6.2.4                   | Track design speed .....   | 56          |
| 6.2.5                   | Walls .....  | 57          |
| 6.2.6                   | Meteorological input data for line description .....   | 57          |
| 6.2.7                   | Integrated line database .....   | 58          |
| 6.2.8                   | Required minimum resolution/accuracy .....   | 60          |
| 7                       | Methods to assess the wind exposure of a railway line .....  | 60          |
| 8                       | Guidance for the analysis and assessment of the cross wind risk .....                              | 61          |

|   |  |    |
|---|--|----|
| 8.1   | General .....  | 61 |
| 8.2   | Infrastructure with train speeds at or above 250 km/h .....                    | 61 |
| 8.3   | Infrastructure with train speeds below 250 km/h .....                          | 61 |
| 9   | Required documentation .....   | 62 |
| 9.1   | General .....  | 62 |
| 9.2   | Assessment of cross wind stability of passenger vehicles and locomotives ..... | 62 |
| 9.3   | Assessment of cross wind stability of freight vehicles .....                   | 62 |
| 9.4   | Acquisition of railway line data .....   | 62 |
| Annex A (informative) Application of methods to assess cross wind stability of vehicles within Europe ..... |  | 63 |
| Annex B (informative) Blockage correction .....   |  | 67 |
| B.1   | Dynamic pressure method .....  | 67 |
| B.2   | German method .....  | 67 |
| B.3   | UK method .....  | 67 |
| B.4   | Slotted walls .....  | 68 |
| Annex C (normative) Wind tunnel benchmark test data for standard ground configuration .....                 |  | 69 |
| C.1   | General .....  | 69 |
| C.2   | ICE 3 leading vehicle wind tunnel model .....                                  | 69 |
| C.3   | TGV Duplex power car wind tunnel model .....                                   | 70 |
| C.4   | ETR 500 power car wind tunnel model .....                                      | 71 |
| Annex D (informative) Other ground configurations for wind tunnel testing .....                             |  | 73 |
| D.1   | Flat ground with gap (TSI HS RST) .....  | 73 |
| D.2   | Double track ballast and rails (TSI HS RST) .....                              | 73 |
| D.3   | Standard embankment of 6 m height (TSI HS RST) .....                           | 74 |
| D.4   | Flat ground without gap (Finnish method) .....                                 | 75 |
| D.5   | Double track ballast and rails (UK method) .....                               | 75 |
| Annex E (informative) Wind tunnel benchmark test data for other ground configurations .....                 |  | 77 |
| E.1   | General .....  | 77 |
| E.2   | ICE 3 leading vehicle wind tunnel model .....                                  | 77 |
| E.3   | TGV Duplex power car wind tunnel model .....                                   | 81 |
| E.4   | ETR 500 power car wind tunnel model .....                                      | 86 |
| Annex F (informative) Embankment overspeed effect .....   |  | 90 |
| Annex G (informative) Atmospheric boundary layer wind tunnel testing .....                                  |  | 91 |
| G.1   | General .....  | 91 |
| G.2   | Benchmark tests .....  | 91 |
| G.3   | Wind simulation .....  | 92 |
| G.3.1   | Boundary layer profiles .....  | 92 |
| G.3.2   | Turbulence intensities .....   | 92 |
| G.3.3   | Turbulence integral length scale .....   | 93 |
| G.4   | Model scale and blockage requirements .....                                    | 93 |
| G.5   | Modelling accuracy .....   | 93 |
| G.6   | Instrumentation requirements .....   | 93 |
| G.6.1   | General .....  | 93 |
| G.6.2   | Speed measurement .....  | 93 |
| G.6.3   | Force and moment balance .....   | 94 |
| G.7   | Data acquisition requirements .....  | 94 |
| G.7.1   | General .....  | 94 |
| G.7.2   | Time scale, sampling frequency and acquisition duration .....                  | 94 |
| G.7.3   | Measurement of temperature and atmospheric pressure .....                      | 95 |

|   |  |            |
|---|--|------------|
| G.8   | Calculation of mean values .....   | 95         |
| G.9   | Calculation of peak values .....   | 95         |
| G.10  | Calculation of air density .....   | 96         |
| G.11  | Calculation of the uncorrected rolling moment coefficient .....            | 96         |
| G.12  | Determination of the lee rail roll moment coefficient .....                | 97         |
| G.13  | Data interpolation .....   | 97         |
| <b>Annex H (informative) Five mass model .....</b>  |  | <b>98</b>  |
| H.1   | General .....  | 98         |
| H.2   | Derivation of formulae .....   | 100        |
| H.3   | Example calculations .....   | 104        |
| H.3.1   | General .....  | 104        |
| H.3.2   | Example vehicle 1 .....  | 105        |
| H.3.3   | Example vehicle 2 .....  | 108        |
| <b>Annex I (normative) Mathematical model for the Chinese hat .....</b>   |  | <b>113</b> |
| I.1   | Mathematical model for Chinese hat .....                                   | 113        |
| I.2   | Example calculation for Chinese hat .....                                  | 116        |
| <b>Annex J (informative) Stochastic wind model .....</b>  |  | <b>122</b> |
| J.1   | General .....  | 122        |
| J.2   | Assumptions .....  | 122        |
| J.3   | Application range .....  | 122        |
| J.4   | General Approach .....   | 122        |
| J.4.1   | General .....  | 122        |
| J.4.2   | First step: wind tunnel tests (aerodynamic properties determination) ..... | 123        |
| J.4.3   | Second step: calculation of turbulent wind speed .....                     | 123        |
| J.4.4   | Third step: evaluation of aerodynamic forces .....                         | 127        |
| J.4.5   | Fourth step: simulation of vehicle dynamics .....                          | 128        |
| J.4.6   | Fifth step: evaluation of characteristic wind speed .....                  | 128        |
| <b>Annex K (informative) Stability of passenger vehicles and locomotives against overturning according to national guidelines .....</b> |  | <b>130</b> |
| K.1   | General .....  | 130        |
| K.2   | According to DB Guideline 80704 (Germany) .....                            | 130        |
| K.3   | According to Railway Group Standard GM/RT 2141 (Great Britain) .....       | 132        |
| <b>Annex L (informative) Information on methods to assess the wind exposure of a railway line .....</b>                                 |  | <b>133</b> |
| L.1   | General .....  | 133        |
| L.2   | Wind map approaches .....  | 133        |
| L.3   | Transfer approaches .....  | 134        |
| <b>Annex M (informative) Extended CWCs .....</b>  |  | <b>136</b> |
| <b>Bibliography .....</b>   |  | <b>139</b> |
