ISO 22480-1:2022-02 (E)

Railway applications - Concrete sleepers and bearers for track - Part 1: General requirements

Contents

Page

Foreword ..... **v**

Introduction ..... **vi**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Symbols and abbreviated terms **3**

5 Determination of test loads **4**
5.1 General 4
5.2 Loads for sleepers and bearers in track 4
5.2.1 Loads 4
5.2.2 Load distribution 5
5.2.3 Characteristic bending moments 5
5.3 Test loads 5
5.3.1 General 5
5.3.2 Method A: verification of bending capacities 5
5.3.3 Method B: verification of minimum performance requirements 6

6 Data to be supplied **6**
6.1 General 6
6.2 Data to be supplied by the purchaser 6
6.3 Data to be provided by the supplier 7
6.3.1 Before the design approval tests 7
6.3.2 After the design approval tests 7
6.3.3 Prior to start-up of production 7

7 Materials **8**
7.1 General requirements 8
7.2 Cement 8
7.3 Aggregates 8
7.4 Mixing water 9
7.5 Admixtures 9
7.6 Concrete 9
7.6.1 Material requirements 9
7.6.2 Information to be provided by the supplier 10
7.6.3 Changes for the material and processes 10
7.7 Steel 10
7.7.1 Prestressing tendons 10
7.7.2 Reinforcing steel 10
7.7.3 Steel connecting bar for twin-block sleepers 10
7.8 Embedded components 11

8 General requirements **11**
8.1 Design 11
8.1.1 Geometrical design 11
8.1.2 Concrete cover 13
8.1.3 Prestressing system design 13
8.1.4 Reinforcing steel design 14
8.2 Manufacturing process 14

8.2.1 General requirements 14
8.2.2 Manufacturing rules 14
8.2.3 Curing 15
8.2.4 Concrete and ambient temperature 15
8.3 Surface finish 17
8.4 Marking 17
9 Product testing 18
9.1 General 18
9.2 Mechanical parameters 18
9.3 Tests on product 19
9.4 Tests on concrete 19
9.5 Tests in combination with the fastening system 19
9.6 Additional tests 19
10 Quality control 19
10.1 General 19
10.2 Quality control during design approval tests 20
10.3 Quality control during manufacturing 20
Annex A (informative) **Determination of factor k_t for time dependent losses of strength 22**
Annex B (informative) **Calculation of the bending capacity by method A 24**
Annex C (informative) **Determination and application of minimum performance requirements and related test loads from experience in track for method B 26**
Annex D (informative) **Correspondence between relevant regional or national standards 30**
Annex E (informative) **Test method for measuring the water absorptionof concrete at atmospheric pressure 32**
Annex F (informative) **Definition and recommendation for measurement of rail seat inclination and twist between rail seats 33**
Annex G (informative) **Surface finish 34**
Annex H (informative) **Quality control during manufacturing – Routine tests and frequency of testing 36**
