

# DIN EN 14363:2022-10 (E)

## Railway applications - Testing and Simulation for the acceptance of running characteristics of railway vehicles - Running Behaviour and stationary tests (includes Amendment :2022)

---

<b>Contents</b>		<b>Page</b>
European foreword .....		8
Introduction .....		10
<b>1</b>	<b>Scope .....</b>	<b>12</b>
<b>2</b>	<b>Normative references .....</b>	<b>14</b>
<b>3</b>	<b>Terms and definitions .....</b>	<b>15</b>
<b>4</b>	<b>Deviations from requirements .....</b>	<b>17</b>
<b>5</b>	<b>Test requirements .....</b>	<b>18</b>
5.1	Measuring uncertainty .....	18
5.2	Test extent .....	18
5.2.1	General .....	18
5.2.2	Fault modes .....	18
5.3	Test vehicle .....	19
5.3.1	Selection and status of the vehicle .....	19
5.3.2	Loading conditions .....	19
5.3.3	Distribution of static wheel forces .....	20
5.4	Assessment of test result .....	20
5.5	Documentation of test .....	21
<b>6</b>	<b>First stages assessment .....</b>	<b>22</b>
6.1	Safety against derailment on twisted track .....	22
6.1.1	General .....	22
6.1.2	Signal processing .....	23
6.1.3	Rail test conditions .....	23
6.1.4	Vehicle test conditions .....	24
6.1.5	Test methods .....	26
6.2	Safety against derailment under longitudinal compressive forces in S-shaped curves .....	41
6.3	Evaluation of the torsional coefficient of a vehicle body .....	41
6.4	Determination of displacement characteristics .....	41
6.5	Loading of the diverging branch of a switch .....	41
6.6	Running safety in curved crossings for vehicles with small wheels .....	42
<b>7</b>	<b>Second stage - dynamic performance assessment .....</b>	<b>42</b>
7.1	General .....	42
7.2	Choice of measuring method .....	43
7.2.1	General .....	43
7.2.2	Base conditions for the use of the simplified measuring method and measurement of axle box forces .....	45
7.2.3	Simplifications for separate stability testing .....	45
7.3	Performing on-track tests .....	46
7.3.1	General .....	46
7.3.2	Test zones and track sections .....	52
7.3.3	Extent of tests .....	53
7.3.4	Test operation .....	54

7.4	Measured quantities and measuring points .....	54
7.5	Assessment quantities and limit values .....	56
7.5.1	General .....	56
7.5.2	Running safety .....	62
7.5.3	Track loading .....	63
7.5.4	Ride characteristics .....	63
7.6	Test evaluation .....	63
7.6.1	Overview .....	63
7.6.2	Recording the measuring signals .....	64
7.6.3	Statistical evaluation in test zones .....	65
7.6.4	Evaluation of test results in transition curves .....	73
7.6.5	Verification of stability .....	73
7.7	Documentation .....	73
7.7.1	General .....	73
7.7.2	Description of the vehicle design and status of the tested vehicle .....	73
7.7.3	Additional information for future extension of acceptance .....	74
7.7.4	Description of the test routes .....	74
7.7.5	Description of data capture .....	74
7.7.6	Description of evaluation .....	74
7.7.7	Test results (including additional information for model validation) .....	74
7.7.8	Deficiencies in reaching the target test conditions .....	76
7.7.9	Infrastructure conditions more severe than the target test conditions .....	76
<b>Annex A (informative) Information on safety against derailment .....</b>		<b>77</b>
A.1	Factors influencing the safety against derailment of vehicles running on twisted track ....	77
A.1.1	General .....	77
A.1.2	Wheel unloading influences .....	77
A.1.3	Guiding force influences .....	77
A.2	Evaluation and limit value for safety against derailment .....	78
A.3	Friction conditions during testing on special track .....	79
A.4	Special conditions for vehicles with air springs .....	81
A.4.1	General .....	81
A.4.2	4-point levelling systems .....	82
A.4.3	3-point levelling system with longitudinal connection .....	82
A.4.4	2-point levelling systems .....	82
A.5	Test twist conditions for articulated vehicles .....	83
A.6	Test twist conditions for vehicles with more than two suspension levels .....	90
A.7	Calculation of the shim sizes (test method 1) .....	91
A.8	Performing and evaluating a twist test for a two-axle vehicle (test method 2) .....	92
A.8.1	General .....	92
A.8.2	Required test rig .....	92
A.8.3	Performing the twist test .....	93
A.8.4	Evaluation of twist diagrams .....	93
A.9	Performing and evaluation of a twist test for a vehicle with two bogies with two axles (test method 2) .....	95
A.9.1	General .....	95
A.9.2	Required test rig .....	95
A.9.3	Performing and evaluating a combined body and bogie twist test (test method 2.1) .....	95
A.9.4	Performing separate twist tests on bogie centre distance and bogie wheel base (test method 2.2) .....	99
<b>Annex B (informative) Computer simulations designed to examine whether the vehicle has an acceptable resistance to flange climbing derailment at low speed .....</b>		<b>104</b>
B.1	General requirement .....	104
B.2	Computer output .....	104
B.3	Track input .....	104
B.4	Body-bogie yaw torque .....	105
B.5	Performance requirement .....	105
<b>Annex C (informative) Tests for determination of the torsional coefficient of a vehicle body .....</b>		<b>107</b>

C.1	Force-deflection measurement directly at the vehicle body .....	107
Figure C.1	-- Nomenclature of the supporting points .....	107
C.2	Force-deflection measurement at the contact points between wheel and rail after blocking of the suspension(s) between wheelset (bogie frame) and vehicle body .....	108
<b>Annex D (informative) Determination of displacement characteristics for application with EN 15273</b>		<b>109</b>
D.1	Introduction .....	109
D.2	Determination of displacement characteristics .....	109
D.2.1	General .....	109
D.2.2	Assessment Requirements .....	109
D.2.3	Test conditions .....	109
D.2.4	Method 1: Stationary test .....	110
D.2.5	Method 2 On-track test .....	113
<b>Annex E (informative) Assessment of the behaviour of vehicles with small wheels in curved crossings</b>		<b>115</b>
E.1	Purpose .....	115
E.2	Area of application .....	115
E.3	Description of the crossing geometry .....	115
E.4	Test conditions .....	118
E.4.1	General .....	118
E.4.2	Method 1: Lateral forces and angle of attack .....	119
E.4.3	Method 2: Examination of the impact on the crossing nose .....	119
E.4.4	Limit values .....	119
E.4.5	Assessment .....	120
E.4.6	Dispensation .....	120
E.4.7	Simulation .....	120
<b>Annex F (informative) Test specification for assessment of vehicle behaviour in switches and crossings</b>		<b>121</b>
F.1	Introduction .....	121
F.2	Definitions .....	121
F.3	Test conditions .....	121
F.4	Assessment of the test results .....	122
F.5	Documentation .....	122
<b>Annex G (normative) Coordinate system for measured quantities</b>		<b>126</b>
<b>Annex H (informative) Operational parameters</b>		<b>127</b>
<b>Annex I (informative) Position of the different wheelsets during test</b>		<b>129</b>
<b>Annex J (informative) Additional track loading assessment quantities</b>		<b>130</b>
J.1	General .....	130
J.2	Maximum lateral force .....	130
J.3	Combination of lateral and vertical forces .....	130
<b>Annex K (informative) Evaluation and background of the rail surface damage quantity</b>		<b>132</b>
<b>Annex L (informative) Typical maximum estimated values of ride characteristics</b>		<b>134</b>
<b>Annex M (normative) Track geometric quality - Selection of test tracks</b>		<b>135</b>
M.1	Basis of evaluation .....	135
M.2	Assessment quantities for track geometric quality .....	135

M.3	Different measuring systems .....	136
M.4	Target test conditions .....	137
M.5	Reporting .....	139
Annex N (informative) Background of track quality description .....		140
Annex O (normative) Rail profile measurement .....		141
O.1	General .....	141
O.2	Manual measurements .....	141
O.2.1	Measurements for equivalent conicity .....	141
O.2.2	Measurements for radial steering index .....	141
O.3	Automatic measurements .....	141
Annex P (normative) Requirements for evaluation of equivalent conicity .....		142
Annex Q (informative) Radial steering index .....		143
Q.1	Introduction .....	143
Q.2	Calculation of radial steering index .....	144
Annex R (normative) Statistical evaluation .....		147
R.1	Objectives and principles of statistical analysis .....	147
R.1.1	General .....	147
R.1.2	One-dimensional method .....	147
R.1.3	Two-dimensional method or simple regression .....	147
R.1.4	Multiple regression .....	147
R.2	Determination of the percentiles for each track section .....	148
R.3	Preparation of the random samples .....	149
R.4	One-dimensional analysis for estimated maximum values .....	149
R.5	Two-dimensional analysis for estimated values .....	149
R.6	Multiple regression analysis for estimated values .....	150
R.7	Statistical evaluation for the overturning criterion .....	152
R.8	Regression assumptions .....	153
R.8.1	Regression assumptions and associated problems .....	153
R.8.2	Identification and correction techniques .....	154
Annex S (informative) Running behaviour of special vehicles .....		156
S.1	General .....	156
S.2	Vehicle design and classification .....	156
S.3	Use of the simplified measuring method .....	157
S.4	Test conditions .....	157
S.5	Specific limit value .....	157
Annex T (informative) Simulation of on-track tests .....		158
T.1	Introduction .....	158
T.2	Fields of application .....	158
T.2.1	General .....	158
T.2.2	Extension of the range of test conditions .....	158
T.2.3	Assessment of vehicles following modification .....	159
T.2.4	Assessment of new vehicles by comparison with an already approved reference vehicle	159
T.2.5	Investigation of dynamic behaviour in case of fault modes .....	160
T.3	Validation .....	160
T.3.1	General principles .....	160
T.3.2	Vehicle model .....	161
T.3.3	Validation of the vehicle model .....	161
T.4	Input .....	175
T.4.1	Introduction .....	175
T.4.2	Vehicle model .....	175

<b>T.4.3</b>	<b>Vehicle configuration .....</b>	<b>175</b>
<b>T.4.4</b>	<b>Track data .....</b>	<b>176</b>
<b>T.4.5</b>	<b>Track model parameters .....</b>	<b>177</b>
<b>T.4.6</b>	<b>Wheel/rail contact geometry .....</b>	<b>177</b>
<b>T.4.7</b>	<b>Rail surface condition .....</b>	<b>177</b>
<b>T.4.8</b>	<b>Direction of travel .....</b>	<b>178</b>
<b>T.4.9</b>	<b>Speed .....</b>	<b>178</b>
<b>T.4.10</b>	<b>Position of the vehicle in the trainset .....</b>	<b>178</b>
<b>T.4.11</b>	<b>Frequency content of simulations .....</b>	<b>178</b>
<b>T.5</b>	<b>Output .....</b>	<b>179</b>
<b>T.6</b>	<b>Documentation .....</b>	<b>179</b>
<b>T.7</b>	<b>Examples for model validation according to Method 1 .....</b>	<b>180</b>
<b>Annex U (informative) Extension of acceptance .....</b>		<b>187</b>
<b>U.1</b>	<b>General .....</b>	<b>187</b>
<b>U.2</b>	<b>Determination of the safety factor .....</b>	<b>195</b>
<b>U.3</b>	<b>Dispensation .....</b>	<b>195</b>
<b>U.3.1</b>	<b>General .....</b>	<b>195</b>
<b>U.3.2</b>	<b>Special cases .....</b>	<b>195</b>
<b>U.4</b>	<b>Use of the simplified method" .....</b>	<b>196</b>
<b>U.5</b>	<b>Requirements depending on the initial approval .....</b>	<b>196</b>
<b>Annex V (normative) Symbols.....</b>		<b>198</b>
<b>Annex W (informative) List with the main technical changes compared to EN 14363:2005, EN 15686:2010 and EN 15687:2010.....</b>		<b>202</b>
<b>Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive (EU) 2016/797 aimed to be covered.....</b>		<b>205</b>
<b>Bibliography .....</b>		<b>207</b>
