DIN EN 16451:2024-06 (E)

Railway applications - Braking - Brake pad holder

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 7

4 Symbols and abbreviations 7

5 Design and manufacture 8
5.1 Latch mechanism 8
5.2 Interchangeability by applying same main dimensions and geometry 8
5.2.1 General 8
5.2.2 Interchangeability for "conventional" brake unit 8
5.2.3 Interchangeability for "compact" brake unit 8
5.2.4 Dimensional conformity 8
5.3 Material 8
5.4 Environmental conditions 9
5.4.1 Ambient temperature 9
5.4.2 Other environmental conditions 9
5.5 Loading in the direction of force application 10
5.6 Loading in the direction of the braking moment (tangential force) 10
5.7 Vibrations and shocks 10
5.7.1 New designs 10
5.7.2 Existing designs 11

6 Type test methods 11
6.1 Sampling for type test 11
6.2 Test requirements 11
6.3 Test procedure 11
6.3.1 Interchangeability by applying same main dimensions and geometry 11
6.3.2 Material 11
6.3.3 Salt spray test 12
6.3.4 Loading in the direction of force application 12
6.3.5 Loading in the direction of the braking moment (tangential force) 14
6.3.6 Vibrations and shocks 15

7 In-service assessment 18

8 Designation 18

9 Identification and marking 18

Annex A (normative) Interchangeability for "conventional" brake unit 19

Annex B (informative) Interchangeability for "conventional" brake unit 21

Annex C (normative) Interchangeability for "compact" brake unit 23

Annex D (informative) Interchangeability for "compact" brake unit 24

Annex E (informative) Device with mechanical coding 26

Annex F (informative) In-service assessment 27

F.1 General 27
F.2 Test set-up and sampling 27
F.3 Procedure 27
F.4 Pass/fail criteria 27

Bibliography 28
