European foreword 5

1 Scope 7

2 Normative references 7

3 Terms and definitions 8

4 Product definition 9
4.1 Chemical composition 9
4.1.1 Values to be achieved 9
4.1.2 Sampling methods 9
4.1.3 Chemical analysis 9
4.2 Mechanical characteristics 10
4.2.1 Characteristics from the tensile test 10
4.2.2 Impact test characteristics 11
4.2.3 Fatigue characteristics 14
4.3 Microstructure characteristics 16
4.3.1 Values to be achieved 16
4.3.2 Position of the test piece 16
4.3.3 Test method 16
4.4 Material cleanliness 17
4.4.1 Micrographic cleanliness 17
4.4.2 Internal integrity 18
4.5 Permeability to ultrasound 18
4.5.1 General 18
4.5.2 Level to be achieved 18
4.5.3 Test piece 18
4.5.4 Test method 19
4.6 Residual stresses 19
4.6.1 General 19
4.6.2 Values to be achieved 19
4.6.3 Test piece and position of measurement points 20
4.6.4 Measurement method 20
4.7 Surface characteristics 20
4.7.1 Surface finish 20
4.7.2 Surface integrity 23
4.8 Geometrical and dimensional tolerances 25
4.9 Protection against corrosion and against mechanical aggression 29
4.9.1 Final protection 29
4.9.2 Temporary protection 35
4.10 Marking 35
4.11 Material reduction ratio 36

5 Alternative manufacturing process 36

6 Product qualification 36

7 Conditions of supply 36

Annex A (informative) Material sampling from axle journal extension 37

A.1 General 37
A.2 Sampling method 37
A.3 Values to be achieved 37

Annex B (informative) Drawings of test pieces 39

Annex C (normative) Standard sample block for measurement of permeability to ultrasound 42

C.1 Sample block 42
C.2 Tolerances of the standard sample block 44
C.3 Steel grade of the standard sample block 44

Annex D (informative) Position of testing points for the permeability to ultrasound 45

Annex E (informative) Residual stress measurement with strain gauges with saw cutting 46

Annex F (informative) Method for blasting after machining 47

F.1 Blasting principle 47
F.2 Requirements 47
F.3 Parameters 48
F.4 Blasting qualification process 48

Annex G (normative) Method to assess resistance to impact of the coating 49

G.1 Principle 49
G.2 Test piece 49
G.3 Apparatus 49
G.4 Procedure 49
G.5 Expression of results 49

Annex H (normative) Method to assess resistance to gritting of the coating 50

H.1 Introduction 50
H.2 Test piece 50
H.3 Apparatus 50
H.4 Procedure 50
H.5 Expression of results 50

Annex I (normative) Method to assess the resistance of the coating to specific corrosive products 51

I.1 Principle 51
I.2 Test piece 51
I.3 Apparatus 51
I.4 Corrosive products 51
I.5 Procedure 51
I.6 Expression of results 52

Annex J (informative) Method to assess the resistance of the coating to cyclic mechanical stresses 53

J.1 Purpose 53
J.2 Principle 53
J.3 Test piece 53
J.4 Apparatus 53
J.5 Procedure 53
J.6 Expression of results 54

Annex K (normative) Product qualification 55

K.1 General 55
K.2 Requirements and procedures 55

K.3 Requirements 58
K.4 Qualification procedure 58
K.5 Qualification validity 60
K.6 Qualification file 60
K.7 Qualification of the longitudinal machining of bores in the axles 61

Annex L (normative) Conditions of supply of the product 62

L.1 General 62
L.2 Technical specification content 62
L.3 Delivery condition 63
L.4 Controls on each axle 63
L.5 Batch control 63
L.6 Quality plan 66
L.7 Allowable rectification 66

Annex M (normative) Measurement of the hydrogen content in the steel for axles at the melting stage 68

M.1 General 68
M.2 Sampling 68
M.3 Analysis methods 68
M.4 Precautions 68

Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive (EU) 2016/797 aimed to be covered 69
