DIN EN 17976:2025-03 (E)

Railway applications - Bolting of rail vehicles and components

Contents

Page

European foreword 5

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 7

4 Symbols and abbreviations 12

5 Personnel competency 16

6 Safety category 16
6.1 Safety category of mechanical and electrical connections 16
6.2 Requirements depending on safety category 17
6.2.1 Mechanical connections 17
6.2.2 Electrical connections 18

7 Design 18
7.1 Design rules 18
7.1.1 General 18
7.1.2 Thread 18
7.1.3 Bolts and nuts 19
7.1.4 Mechanical properties of fasteners 19
7.1.5 Design of component 20
7.1.6 Resilience of a bolted joint 24
7.1.7 Length of engagement 25
7.1.8 Chamfers 27
7.1.9 Thread protrusions 27
7.1.10 Clearance hole for bolt 27
7.1.11 Counterbore/countersink 28
7.1.12 Core hole diameter and thread runout 29
7.1.13 Accessibility for tools and tightening 30
7.2 Mechanical connection -- Strength proof 31
7.2.1 General 31
7.2.2 Criterion `no permanent plastic deformation' in assembled state 31
7.2.3 Functional requirements 33
7.2.4 Criterion `no permanent plastic deformation' under loads 35
7.2.5 Surface Pressure 35
7.2.6 Creep 36
7.2.7 Engagement length 36
7.2.8 Fatigue assessment 36
7.2.9 Failure 37
7.2.10 Partial factors for strength assessment 37
7.3 Electrical connection 38
7.3.1 General 38
7.3.2 Selection of the fasteners 38
7.3.3 Assembly of the bolted joints 39
7.4 Corrosion protection 41
7.4.1 Effect of protection of coatings and materials in fasteners 41
7.4.2 Galvanic corrosion 44

7.5 Securing methods ... 47
7.5.1 Bolted joints for applications in terms of mechanical engineering ... 47
7.5.2 Bolted joints for electrical connections ... 47
7.5.3 Securing measures ... 47
7.6 Documentation of the design ... 52

8 Assembly of bolted joints ... 52
8.1 General ... 52
8.2 Tools ... 53
8.2.1 Tool requirements ... 53
8.2.2 Monitoring of the tightening tools and systems ... 55
8.3 Tightening method ... 56
8.3.1 General ... 56
8.3.2 Marking of bolted joints ... 56
8.3.3 Work instructions and requirements for the assembly process ... 56
8.4 Environmental conditions ... 58
8.5 Validation of the assembly result during first assembly review ... 58
8.6 Quality assurance of the assembly result in serial production ... 58
8.7 Record of assembly ... 59
8.8 Reuse of fasteners ... 60
8.9 Lifetime inspection ... 60

9 Performance classes ... 60

10 Properties of parameters ... 61
10.1 General ... 61
10.2 Statistical evaluation ... 61
10.3 Physical properties ... 65
10.3.1 Static friction coefficient in the interface ... 65
10.3.2 Friction coefficients for tightening ... 65
10.3.3 Limit values for surface pressure ... 66
10.3.4 Embedding ... 66

Annex A (informative) Size estimation ... 67

A.1 General ... 67
A.2 Limits for the size estimation ... 67
A.3 Execution of the size estimation ... 68

Annex B (informative) Determination and examples for safety categories ... 74

B.1 General ... 74
B.2 Determination of safety category of mechanical bolted joint basing on severity levels ... 74
B.3 Determination of safety category of electrical bolted joints ... 76
B.4 Examples ... 76
B.5 Flow chart for classification of severity level for mechanical bolted joints ... 78
B.6 Modifications to safety categories H and M ... 80
B.7 Determination of safety category for bolted joints based on EN 15085-3:2022+A1:2023 ... 80

Annex C (informative) Mounting values for torque controlled assembly ... 81

C.1 General ... 81
C.2 Limits for the listed tightening torque ... 81
C.3 Formulas ... 82
C.4 Maximum tightening torque and maximum preload ... 82

Annex D (informative) Examples for classification of bolted joints for special vehicles ... 87

D.1 Examples ... 87

Annex E (informative) Statistical evaluation ... 90

E.1 Procedure for statistical test evaluation of a single parameter ... 90
E.2 Procedure for statistical test evaluation for an entire calculation criterion ... 95

Bibliography ... 99
