

DIN EN 14752:2025-08 (E)

Railway applications - Bodyside entrance systems for rolling stock

Contents		Page
European foreword		6
Introduction		7
1	Scope	8
2	Normative references	8
3	Terms and definitions	9
4	Constructional requirements	13
4.1	Door design	13
4.1.1	Door throughway design	13
4.1.2	Steps	15
4.1.3	Staff access from track level	18
4.1.4	Relative position of the step edge	18
4.1.5	Train surfing	18
4.1.6	Door windows	18
4.1.7	Design of body side entrance doors used for accessing driver's cabs	19
4.1.8	Water drainage	19
4.2	Mechanical strength	19
4.2.1	Door mechanical strength	19
4.2.2	Step(s) mechanical strength	21
4.3	Local door operating devices	22
4.3.1	Door control devices	22
4.3.2	Emergency egress device	23
4.3.3	Access device	24
4.4	Labels/warning signs	25
4.5	Interfaces with the vehicle	25
4.5.1	Electric and pneumatic power supplies	25
4.5.2	Mechanical interface with the vehicle	25
4.6	Other requirements	25
4.6.1	Fire protection	25
4.6.2	Insulation	26
4.7	Electronic equipment	26
4.7.1	Hardware	26
4.7.2	Software for electronic door control systems	26
4.8	Reliability, availability, maintainability and safety (RAMS)	26
4.9	Protection against electrical hazards	27
4.10	Environmental conditions	27
4.10.1	Weather	27
4.10.2	Water tightness	27
4.10.3	Pressure tightness	28
4.11	Manual and semi-automatic ramps, bridging plates	28
5	Operational requirements	28
5.1	Door control	28
5.1.1	General	28
5.1.2	Release doors and steps	28
5.1.3	Interlocking of released doors	29
5.1.4	Single point failure	29
5.1.5	Mechanical locking	29

5.1.6	Out-of-service devices	29
5.1.7	Isolation for maintenance purposes	31
5.2	Closing and opening conditions	31
5.2.1	Safety during closing	31
5.2.2	Entrance system closed proving	43
5.3	Opening conditions	43
5.3.1	Safety during opening	43
5.3.2	Limitation of opening	43
5.4	Moveable step obstacle detection	44
5.4.1	General	44
5.4.2	Steps outside the vehicle	44
5.4.3	Steps inside the vehicles	44
5.5	Emergency operation	44
5.5.1	Emergency egress	44
5.5.2	Emergency windows in access doors	47
5.5.3	Access device	47
5.5.4	Powering up	48
5.6	Other requirements	48
5.6.1	Passenger access door area illumination	48
5.6.2	Status indication	48
6	Categories of tests	48
6.1	General	48
6.2	Type tests	48
6.3	Routine tests during manufacture	49
6.4	Routine tests on the fully assembled vehicle/train consist	49
7	Documentation related to installation and maintenance of the entrance system	49
Annex A (normative) Passenger operating devices		50
A.1	Purpose	50
A.2	Design of door control devices	50
A.3	Labels on or near control devices	51
A.4	Recommended emergency egress device	52
A.5	Sample of labels	53
Annex B (normative) Water test procedure		54
B.1	Purpose	54
B.2	Test arrangement	54
B.3	Test procedure	55
B.4	Test decision	55
Annex C (normative) Specification and testing of the pressure tightness of door		57
C.1	Purpose	57
C.2	Calculation - Flowchart	57
C.3	Example of pressure tightness requirement specification	57
C.4	Pressure tightness testing	58
C.4.1	General	58
C.4.2	Variable pressure measurement method	58
C.4.3	Variant: Constant pressure method of measurement	60
Annex D (normative) Requirements for measuring the closing forces of power-operated doors		62
D.1	General	62
D.2	Terms and definitions	62
D.3	Measurements	63
D.3.1	Conditions of measurement	63
D.3.2	Measurement points	63
D.3.3	Measuring method	63

Annex E (normative) Test plan	65
Annex F (normative) Load requirements for doors due to aerodynamic loads on passenger trains ..	67
Annex G (informative) Clauses in this document requiring clarification in the technical specification	68
Annex H (normative) RIC-KEY	70
Annex I (informative) Calculation of kinetic energy	71
Annex J (informative) Passenger flow detection	77
J.1 General	77
J.2 Light barrier	77
J.3 Step sensors for external steps	77
Annex K (informative) Full door throughway detection system	78
K.1 General	78
K.2 Full door throughway detection systems	78
K.2.1 Full door throughway detection system near the door leaves	78
K.2.2 Full door throughway detection on the door leaf	83
Annex L (informative) Partial door throughway detection system	84
L.1 General	84
L.2 Partial door throughway detection	84
L.2.1 General	84
L.2.2 Detection area	84
L.2.3 Testing	85
Annex M (normative) Anti-Drag test belt material definition	87
M.1 Test object dimension:	87
M.2 Test belt fabric requirements	87
Annex N (informative) Hazards, protection goals and related requirements	88
N.1 General	88
N.2 Relation to the risk management process	88
Bibliography	91
