DIN EN 16432-4:2026-07 (E)

Railway applications - Ballastless track systems - Part 4: Special ballastless track systems for attenuation of vibration

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Abbreviations 7

5 Design approach 8

6 System design 9
6.1 Establishing the interface between acoustic design and track design 9
6.2 Design implications arising from the integration of resilient elements 10
6.3 Control of vibrations using the rail fastening system alone 11
6.4 Mass spring system (MSS) 12
6.4.1 General 12
6.4.2 System classification according to length 13
6.4.3 Joints 15
6.4.4 Transitions 17
6.4.5 Lateral and longitudinal resilient elements 17
6.5 MSS for switches and crossings 22
6.6 Drainage 22
6.7 Design requirements for maintenance and durability 22

7 Acceptance 23
7.1 Acceptance of design 23
7.2 Acceptance of components 23
7.3 Acceptance of works 24
7.3.1 General 24
7.3.2 Stage 1 - Before installation 24
7.3.3 Stage 2 - Installation of resilient elements 24
7.3.4 Stage 3 - Installed mitigation performance 25
7.3.5 Stage 4 - Operational performance 25

Annex A (informative) Typical workflow from design to installation of special ballastless track systems for attenuation of vibration 26

Annex B (informative) Simplified assessment of structural dynamics implications 28
