DIN EN 16431:2026-08 (E)

Railway applications - Infrastructure - Hollow sleepers and bearers

Contents

Page

European foreword 4

1 Scope 5

2 Normative references 5

3 Terms, definitions and abbreviations 5
3.1 Terms and definitions 5
3.2 Abbreviations 7

4 Requirements 7
4.1 General 7
4.2 Mechanical requirements 7
4.3 Functional requirements 7
4.4 Design requirements 8
4.5 Materials requirements 9
4.6 Environmental requirements 9
4.6.1 General 9
4.6.2 Cold and hot temperature 9
4.6.3 Flammability 9
4.6.4 Effect of exposure to severe environmental conditions 9
4.7 Requirements for interfaces with mechanical equipment in case of integrated system (optional) 9

5 Tests and calculation methods for homologation 9
5.1 General 9
5.2 Tests for fastening system interface 9
5.2.1 Effect of repeated loading test 9
5.2.2 Pull-out test 10
5.2.3 Pad and assembly stiffness test 10
5.3 FEM calculation for the body (for steel body only) 10
5.3.1 General 10
5.3.2 Service fatigue design for centre section 10
5.3.3 Service fatigue design for rail seat section 11
5.3.4 Maximum load at rail seat section 12
5.4 Bending test for the body 12
5.5 Electrical resistance test 13
5.6 Field test 13

6 Acceptance criteria for homologation 13
6.1 Fastening system interface 13
6.1.1 Effect of repeated loading test 13
6.1.2 Pull-out test 13
6.1.3 Pad and assembly stiffness 14
6.2 Body 14
6.2.1 Bending test 14
6.2.2 FEM calculation (for steel body only) 14
6.3 Electrical resistance 14
6.4 Field test 14

7 Tests and tolerances for quality control 14
7.1 Dimensional tolerances 14

7.2 Electrical resistance 15

8 Quality 15
8.1 General 15
8.2 Quality control during homologation tests 16
8.3 Quality control during manufacturing (routine tests) 16

9 Traceability 16

Annex A (normative) Bending test for body only 17

A.1 Scope 17
A.2 Apparatus - Load application devices 17
A.3 Test specimens 19
A.4 Procedure 19
A.4.1 General 19
A.4.2 Test arrangement 19
A.4.3 Resilient pad 20
A.4.4 Procedure 21
A.5 Test report 22
