DIN EN 12681-2:2018-02 (Engli sch)

Founding - Radiographic testing - Part 2: Techniques with digital detectors

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 7

4 Symbols and abbreviations 13

5 Classification of radiographic techniques and compensation principles 14
5.1 Classification 14
5.2 Compensation principles 14

6 General preparations and requirements 15
6.1 Protection against ionizing radiation 15
6.2 Surface preparation and stage of manufacture 15
6.3 Agreements 15
6.4 Personnel qualification 16

7 Test arrangements 16
7.1 General 16
7.2 Single wall radiography of plane areas 16
7.3 Single wall radiography of curved areas 16
7.4 Double wall radiography of plane and curved areas 17
7.5 Choice of test arrangements for complex geometries 17
7.6 Acceptable test area dimensions 17

8 Choice of tube voltage and radiation source 21
8.1 X-ray devices up to 1 000 kV 21
8.2 Other radiation sources 23

9 Metal screens for IPs and shielding 23

10 Reduction of scattered radiation 25
10.1 Metal filters and collimators 25
10.2 Interception of backscattered radiation 26

11 Source object and detector position 26
11.1 General 26
11.2 Source-to-object distance for magnification < 1,5 26
11.3 Conditions for magnification 1,5 28
11.4 Identification of image, test area, detector position plan 30

12 Data processing 30
12.1 Scan and read out of image 30
12.2 Calibration of DDAs 30
12.3 Bad pixel interpolation 31
12.4 Image processing 31

13 Monitor viewing conditions and storage of digital images 32
14 Techniques for increasing the covered thickness range 32
14.1 General 32
14.2 Contrast decreasing by higher radiation energy 33
14.3 Beam hardening 33
14.4 Thickness equalization 33
15 Requirements on images 34
15.1 Identification of images 34
15.2 Marking of the test areas 34
15.3 Overlap of digital images 34
16 Image quality 34
16.1 Types and positions of image quality indicators (IQI) 34
16.2 Minimum image quality values 35
16.3 Minimum normalized signal-to-noise ratio (SNR_N) 35
16.4 Compensation principle CP II 36
16.5 Regular performance verification of digital radiography systems 36
17 Influence of crystalline structure 36
18 Acceptances criteria 37
18.1 General 37
18.2 Severity levels 37
18.3 Wall section zones 37
19 Test report 38
Annex A (normative) Minimum image quality values 40
Annex B (normative) Severity levels for steel castings 44
Annex C (normative) Severity levels for cast iron castings 47
Annex D (normative) Severity levels for aluminium and magnesium alloy castings 49
Annex E (normative) Severity levels for titanium and titanium alloy castings 52
Annex F (normative) Determination of basic spatial resolution 54
Annex G (normative) Determination of minimum grey values for CR practice 58
Annex H (informative) Grey values, general remarks (from EN ISO 17636-2:2013, Annex E) 63
