ISO 18466:2016-12 (E)

Stationary source emissions - Determination of the biogenic fraction in CO2 in stack gas using the balance method

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols and abbreviated terms 2

5 Requirements 4
5.1 Input stream parameters 4
5.2 Output stream parameters 4

6 Sampling 5
6.1 Sampling of input streams 5
6.2 Sampling of output streams 5

7 Test methods 5
7.1 General 5
7.2 Process input 5
7.2.1 Amount of fuel that is combusted 5
7.2.2 Amount of combustion air 6
7.2.3 Auxiliary fuel or oxygen enrichment 6
7.3 Process output 6
7.3.1 Stack emissions 6
7.3.2 Energy production 6
7.3.3 Solid outputs 6

8 Balance calculation 6
8.1 General 6
8.2 Mass balance 7
8.3 Ash balance 7
8.4 Carbon balance 7
8.5 Energy balance 7
8.6 O2 consumption balance 8
8.7 Difference between O2 consumption and CO2 production 9
8.8 Water balance 10
8.9 Composition of the organic matter 10
8.10 Operating data of the Waste for Energy (WfE) plant and plausibility checks 11
8.11 Mathematical solution with data reconciliation 12
8.12 Calculation model 13

9 Operating the model 20
9.1 Installation routines 20
9.2 Ongoing operation calculation routines 21

10 Uncertainty budget methodology and interpretation 21

Annex A (informative) Reference chemical compositions of moisture and ash free biogenic and fossil organic matter 22

Annex B (informative) Reference chemical compositions for the auxiliary fuels 23

Bibliography 24
