ISO 16000-36:2018 (E)

Indoor air — Part 36: Standard method for assessing the reduction rate of culturable airborne bacteria by air purifiers using a test chamber

Contents

		Foreword		
		Introduction		
1		Scope		
2		Normative references		
3	Terms and definitions			
4		Principle		
5		Apparatus and materials		
	5.1 5.2 5.2.2 5.2.2 5.2.2 5.2.2 5.2.2	Apparatus Materials Test bacteria Culture media and reagents Culture media and reagents Dutrient broth Mutrient agar		
6		Preparation of the stock cultures and working cultures of the test bacteria		
	6.1 6.2 6.3	Preparation and maintenance of stock culture Preparation and maintenance of working cultures of the test bacteria on agar plates Preparation of working culture suspensions		
7		Procedures		
	7.1 7.2	General Step 1 — Measurement of the concentration of culturable test bacteria, ci, without operating the air purifier		
	7.2.2 7.2.2			
	7.2.3	Measurement of bacterial background concentration in the test chamber		
	7.2.4 7.2.5	9		
	7.2.6			
	7.2.7 7.3	Post-test actions Step 2 — Measurement of the concentration of culturable test bacteria, ct, after operating the air purifier		
8		Calculation and expression of results		
	8.1 8.2 8.3	Calculation of the concentration of airborne culturable bacteria Conditions for a valid test Reduction rate of bacteria		
9		Test report		
10		Quality assurance		
Annex A		(informative) Test chamber		

Annex B (informative) Natural decay rate according to the operating mode of air purifier

Annex C (informative) Homogeneity of airborne culturable bacteria in the test chamber
