DIN EN 17255-1:2019-10 (E)

Stationary source emissions - Data acquisition and handling systems - Part 1: Specification of requireme nts for the handling and reporting of data

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Symbols and abbreviations 12
4.1 Symbols 12
4.2 Abbreviations 13

5 Principles 14
5.1 General 14
5.2 Outline of approach 15

6 Input data 16
6.1 Emission data 16
6.2 Peripheral data 16
6.3 Flow data 16
6.4 Plant process data 16
6.5 Manually entered data 16

7 First level data 16
7.1 General 16
7.2 FLD values 17
7.3 Data outside the measurement range 17
7.4 Status information associated with FLD 17
7.4.1 AMS status 17
7.4.2 Status of peripheral data 18
7.4.3 Plant information 18
7.5 Calculation of standardized first level data 18
7.6 QAL3 19
7.7 Flow data 19

8 Calculation of reported data 20
8.1 General 20
8.2 Averages 20
8.2.1 General 20
8.2.2 Block Averages 20
8.2.3 Rolling Averages 21
8.3 Calculation of short-term averages 21
8.4 Status information associated with STA 21
8.4.1 Status of the data 21
8.4.2 Plant operation mode 22
8.5 Validity of the STA 22
8.6 STA of peripheral data 23
8.6.1 Peripheral data from AMS 23
8.6.2 Missing peripheral values 24

8.7 Calculation of standardized short-term averages 24
8.8 Calculation of SSTA for a common stack 24

DIN EN 17255-1:2019-10 EN 17255-1:2019 (E) 8.9 Calculation of mass emission for each STA period 25
8.10 Calibration range check 26
8.11 Validated short-term averages 26
8.12 Long-term averages 26
8.13 Percentage of values complying with ELV 26
8.14 Mass emissions 27
8.15 Invalidated days 27

9 Reporting and summary statistics 27
9.1 DAHS operational requirements 27
9.2 Reports 27

Annex A (informative) Data flow charts 29

A.1 General 29
A.2 Formation of first level data 29
A.3 Determination of short-term averages 30
A.4 Determination of standardized short-term averages 31
A.5 Determination of validated short-term averages 32
A.6 Determination of short-term averages of mass emissions 32
A.7 Determination of long-term averages 33

Annex B (normative) Conversion procedures 34

B.1 General 34
B.2 Conversion of volume fraction to mass concentration 34
B.3 Conversion of volume to standard conditions 34
B.4 Conversion of mass concentration with peripheral parameters 35
B.5 Conversion of waste gas volume to standard conditions 36
B.6 Calculation of volumetric gas flow 36
B.7 Calculation of mass flow 37
B.8 Calculation of NOx as NO2 equivalent 37

Annex C (informative) Determining capping levels 38

C.1 Capping values 38
C.2 Setting the level for capping 38

Annex D (normative) Calculation of exceedance for CO over a rolling 24 h period 39
