# DIN EN 18168:2026-06 (E)

## Ambient air - Biomonitoring with higher plants - Method of the standardized rye-grass exposure

## Contents

Page

European foreword ..... 4

Introduction ..... 5

1 Scope ..... 7

2 Normative references ..... 7

3 Terms and definitions ..... 8

4 Principle of the method ..... 9

5 Test methods ..... 10
5.1 Material ..... 10
5.1.1 Grass species and cultivar ..... 10
5.1.2 Substrate ..... 10
5.1.3 Fertiliser solution ..... 11
5.1.4 Water ..... 11
5.1.5 Exposure device ..... 11
5.2 Cultivation ..... 12
5.3 Exposure ..... 14
5.4 Exposure location ..... 14
5.5 Exposure duration ..... 15

6 Sampling and handling of samples ..... 15
6.1 General ..... 15
6.2 Sampling ..... 15
6.3 Transport ..... 16
6.4 Preparation of the samples ..... 16
6.5 Storage ..... 16

7 Documentation ..... 16

8 Data handling and data reporting ..... 17
8.1 Performance characteristics ..... 17
8.2 Study design and data handling/reporting in dependence on the required explanatory power of the study ..... 17

9 Quality control and quality assurance ..... 17
9.1 Control of the plant material ..... 17
9.2 Requirements for the exposure locations ..... 17
9.3 Requirements for the sample quantity ..... 17
9.4 Analytical requirements ..... 17

10 Presentation of measured data ..... 18

11 Assessment ..... 18
11.1 General ..... 18
11.2 Reference values for comparison ..... 18
11.3 Threshold values ..... 18

**Annex A (informative) Recommended upper limits for element concentrations in substrate ..... 20**

**Annex B (informative) Examples of exposure devices ..... 22**

**Annex C (informative) Plates: cultivation and sampling ..... 26**

**Annex D (informative) Sample preparation (before analysis) ..... 27**

**Annex E (informative) Examples of protocols for documentation ..... 28**

**Annex F (informative) Study design, data analysis and interpretation ..... 30**

**Annex G (informative) Reference data ..... 35**

**Bibliography ..... 40**
