| European foreword.....   |  | 4           |
| <b>Annex ZA (informative) Relationship between this European Standard and the essential safety requirements of Directive 2014/68/EU (Pressure Equipment Directive) aimed to be covered</b> ..... |  | <b>5</b>    |
| Foreword.....  |  | 7           |
| Introduction.....  |  | 8           |
| <b>1</b>   | <b>Scope</b> .....   | <b>9</b>    |
| <b>2</b>   | <b>Normative references</b> .....  | <b>9</b>    |
| <b>3</b>   | <b>Terms and definitions</b> .....   | <b>9</b>    |
| 3.1  | General.....   | 9           |
| 3.2  | Pressure.....  | 10          |
| 3.3  | Flow rate.....   | 12          |
| 3.4  | Flow area.....   | 13          |
| 3.5  | Fluid state.....   | 13          |
| 3.6  | Temperature.....   | 13          |
| <b>4</b>   | <b>Symbols and abbreviated terms and figures</b> .....   | <b>14</b>   |
| 4.1  | Symbols.....   | 14          |
| 4.2  | Abbreviated terms.....   | 16          |
| 4.3  | Figures.....   | 17          |
| <b>5</b>   | <b>Application range of the method</b> .....   | <b>19</b>   |
| 5.1  | General.....   | 19          |
| 5.2  | Limitations of the method for calculating the two-phase mass flux in safety devices.....                     | 19          |
| 5.2.1  | Flashing flow.....   | 19          |
| 5.2.2  | Condensing flow.....   | 20          |
| 5.2.3  | Flashing flow for multi-component liquids.....   | 20          |
| 5.2.4  | Dissolved gases.....   | 20          |
| 5.2.5  | Compressibility coefficient $\omega$ .....   | 21          |
| 5.3  | Limitations of the method for calculating the mass flow rate required to be discharged.....                  | 21          |
| 5.3.1  | Rate of temperature and pressure increase.....   | 21          |
| 5.3.2  | Immiscible liquids.....  | 21          |
| <b>6</b>   | <b>Sizing steps</b> .....  | <b>21</b>   |
| 6.1  | General outline of sizing steps.....   | 21          |
| 6.2  | Step 1 — Identification of the sizing case.....  | 22          |
| 6.3  | Step 2 — Flow regime at the inlet of the vent line system.....   | 23          |
| 6.3.1  | General.....   | 23          |
| 6.3.2  | Phenomenon of level swell.....   | 23          |
| 6.3.3  | Influence of liquid viscosity and foaming behaviour on the flow regime.....                                  | 23          |
| 6.3.4  | Prediction of the flow regime (gas/vapour or two-phase flow).....  | 25          |
| 6.4  | Step 3 — Calculation of the mass flow rate required to be discharged.....                                    | 28          |
| 6.4.1  | General.....   | 28          |
| 6.4.2  | Pressure increase caused by an excess in-flow.....   | 28          |
| 6.4.3  | Pressure increase due to external heating.....   | 30          |
| 6.4.4  | Pressure increase due to thermal runaway reactions.....  | 33          |
| 6.5  | Step 4 — Calculation of the dischargeable mass flux through and pressure change in the vent line system..... | 37          |

|  |   |           |
|--|---|-----------|
| 6.5.1  | General .....   | 37        |
| 6.5.2  | Two-phase flow discharge coefficient, $K_{dr,2ph}$ .....  | 40        |
| 6.5.3  | Dimensionless mass flow rate, $C$ .....   | 41        |
| 6.5.4  | Compressibility coefficient, $\omega$ (numerical method) .....  | 42        |
| 6.5.5  | Calculation of the downstream stagnation condition .....  | 43        |
| 6.5.6  | Slip correction for non-flashing two-phase flow .....   | 43        |
| 6.5.7  | Slip correction for two-phase flow in straight pipes .....  | 44        |
| 6.6  | Step 5 — Ensure proper operation of safety valve vent line systems under plant conditions .....           | 44        |
| 6.7  | Simultaneous calculation of the dischargeable mass flux and pressure change in the vent line system ..... | 44        |
| 6.8  | Summary of calculation procedure .....  | 45        |
| <b>Annex A (informative) Identification of sizing scenarios .....</b>  |   | <b>51</b> |
| <b>Annex B (informative) Example calculation of the mass flow rate to be discharged .....</b>  |   | <b>53</b> |
| <b>Annex C (informative) Example of calculation of the dischargeable mass flux and pressure change through connected vent line systems .....</b> |   | <b>57</b> |
| <b>Annex D (informative) Environmental factor .....</b>  |   | <b>74</b> |
| <b>Bibliography .....</b>  |   | <b>75</b> |
