

ISO/TS 26683-1:2012-05 (E)

Intelligent transport systems - Freight land conveyance content identification and communication (FLC-CIC) - Part 1: Context, architecture and referenced standards

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	3
4	Abbreviated terms	7
5	Context	8
5.1	General context	8
5.2	Road transport information exchanges for supply chain freight time-sensitive delivery	9
5.3	Dangerous goods	11
5.4	Domestic land transport scenarios	15
5.5	Complementariness of standards	15
6	Architecture	17
6.1	Overview	17
6.2	Standardization aspects for intermodal transport	21
6.3	Make and break bulk content identification	23
6.4	Variety of forms of freight land conveyance	24
6.5	Multiple trailers	25
6.6	Principal standards for the intermodal transport scenario	26
6.7	Subsequent standards	26
6.8	Operational aspects for data collection	26
6.9	On-board cargo stress measurement information during road transport	27
7	Freight land conveyance content identification architecture overview	27
7.1	Generalized framework	27
7.2	Cargo/vehicle information data layer	27
7.3	Sensor data	28
7.4	Item data	29
7.5	Agglomeration of data	31
7.6	Aggregation of data	31
7.7	Data transfer	32
8	Freight land conveyance and communication - Application interface profiles	32
8.1	General	32
Annex A (normative) List of referenced standards		33
Annex B (informative) Examples of the system implementation		70
Annex C (informative) ISO 6346 in respect of land conveyance identification		73
Bibliography		77
