

DIN EN 12645:2015-02 (E)

Tyre pressure measuring instruments - Devices for inspection of pressure and/or inflation / deflation of tyres for motor vehicles - Metrology, requirements and testing

Contents	Page
Foreword	4
1 Scope	5
2 Normative references	5
3 Terms and definitions	6
4 Categories	8
5 Metrological requirements	10
5.1 Maximum permissible errors	10
5.2 Hysteresis error	10
5.3 Zero	10
5.3.1 Return of the instrument's indication to zero	10
5.3.2 Zero setting	10
5.4 Units	11
6 Technical requirements	11
6.1 Construction	11
6.2 Analog indicating tyre pressure measuring instrument	11
6.2.1 Scale angle	11
6.2.2 Scale interval	11
6.2.3 Scale spacing	11
6.2.4 Index	12
6.3 Digital indicating tyre pressure measuring instrument	12
6.3.1 Scale interval	12
6.3.2 Readability	12
6.4 Additional constructional requirements	12
6.4.1 Mechanical tyre pressure measuring instruments	12
6.4.2 Electronic tyre pressure measuring instrument	12
6.4.3 Electronic and mechanical tyre pressure measuring instruments	13
6.4.4 Preset device	13
6.5 Operating conditions	13
6.5.1 Climatic requirements	13
6.5.2 Mechanical requirements	14
6.5.3 Electromagnetic immunity requirements for electronic tyre pressure measuring instruments (with digital display and/or electronic sensor)	15
6.5.4 Software requirements for electronic tyre pressure measuring instruments	16
6.5.5 Mounting position requirements	17
6.5.6 Kind of pressure indication requirement	17
7 Type approval testing to check for compliance with metrological and technical requirements	17
7.1 General	17
7.2 Determination of accuracy error	18
7.3 Determination of hysteresis error	18
7.4 Determination of return of instrument's indication to zero	18
7.5 Determination of error after/during a disturbance or influence	18
7.6 Climatic tests	18
7.6.1 Determination of the MPE in the rated temperature in service	18

7.6.2	Rated storage temperature	19
7.6.3	Humidity	19
7.6.4	Corrosion test	19
7.7	Mechanical tests	19
7.7.1	Protection against ingress of water and foreign particles (degree of protection)	19
7.7.2	Examination of the durability of the measuring instrument	20
7.7.3	Vibration (random)	20
7.7.4	Free fall	21
7.8	Electromagnetic immunity	21
7.8.1	AC mains voltage variations	21
7.8.2	DC mains voltage variations	21
7.8.3	AC mains power	21
7.8.4	Bursts on AC and DC mains	21
7.8.5	Electrostatic discharges	21
7.8.6	Fast transients on signal and I/O lines	22
7.8.7	Surges on signal and I/O lines	22
7.8.8	DC mains power	22
7.8.9	Ripple on DC input power ports	22
7.8.10	Surges on AC and DC mains lines	22
7.8.11	Radiated radio-frequency electromagnetic fields	22
7.8.12	Conducted radio-frequency fields	22
7.8.13	Voltage variations (if powered by vehicle battery)	22
7.8.14	Electrical transient conduction along supply lines (if powered by vehicle battery)	23
7.8.15	Load dump (if powered by vehicle battery)	23
7.9	Software examination	25
7.10	Mounting position	26
7.11	Determination of pressure sensor -- kind of pressure test	26
8	Inscriptions and marking	26
8.1	Inscriptions	26
8.1.1	Obligatory inscriptions	26
8.1.2	Optional inscriptions	27
8.2	Verification marks and sealing	27
9	Metrological control	27
9.1	Type approval	27
9.2	Initial Verification	27
9.3	Subsequent verification	27
9.4	In-service control	28
	Annex A (normative) Correspondence between requirements and tests	29
	Annex B (normative) MPE graphics	30
	Annex C (informative) Examples of type approval test sequence for multiple samples	32
	Annex D (informative) Recommended solutions for special test conditions	35
	Bibliography	36
