ISO 21308-6:2018 (E)

Road vehicles — Product data exchange between chassis and bodywork manufacturers (BEP) — Part 6: Coding of hook loader bodywork

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Coding principles

- 4.1 BEP codes of bodywork for hook loaders
- 4.2 Units of BEP code values
- 4.3 References for measurements
- 4.3.1 Global coordinate system (X, Y, Z)
- 4.3.2 Hook loader coordinate system
- 4.4 Related XML coding

5 Coding of geometrical data and space requirements

- 5.1 Installation of hook loader on vehicle
- 5.2 Main dimensions hook loaders
- 5.2.1 Transport position
- 5.2.2 Tipping/dumping position
- 5.2.3 Loading/unloading position

6 Coding of container dimensions and features necessary for the handling

7 Coding of masses

- 7.1 Mass point in transport position
- 7.2 Mass point in working position
- 7.3 Mass point for container

8 Coding of general hook loader data

- 8.1 General hook loader data
- 8.2 Mechanical interfaces to truck
- 8.3 Mechanical interfaces to container
- 8.4 Hydraulics equipment and interfaces
- 8.5 Electrical/electronic equipment and interfaces

Annex A (normative) XML coding related to this document

- A.1 XML version of this document
- A.2 ISO 21308 Part 6 XML code (excerpt of ISO21308-6.xsd)

Annex B (informative) Overview of container frame dimensions

- B.1 Overview of main dimensions included in container frame standards and other technical specifications
