ISO 15638-22:2019 (E)

Intelligent transport systems — Framework for collaborative telematics applications for regulated commercial freight vehicles (TARV) — Part 22: Freight vehicle stability monitoring

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

5 Conformance

6 General overview and framework

7 Basic conceptual operational requirement

7.1 General
7.2 Basic requirements

8 Requirements for services using generic vehicle data

8.1 General
8.1.1 Unregulated application services using only generic basic vehicle data
8.1.2 Unregulated application services using both generic vehicle data and additional application specific data
8.2 Conveyance identifiers

9 Concept of operations for unregulated application services with additional data requirements including roadside sensors

9.1 General
9.2 Statement of the goals and objectives of the system
9.3 Strategies, tactics, policies, and constraints affecting the system
9.4 Organizations, activities, and interactions among participants and stakeholders
9.5 Operational roles and processes for the system
9.5.1 Common role of the prime service provider
9.5.2 Common role of the application service provider
9.5.3 Role of the application service
9.5.4 Service requirements definition
9.5.5 Common role of user
9.5.6 Role of driver
9.5.7 Role of operator
9.5.8 Framework for operation
9.5.9 ROAM ‘app’ library and data pantry

10 Sequence of operations for identified unregulated application services with additional data requirements

10.1 General
10.1.1 Overview
10.1.1.1 Commands
10.1.1.2 GET TARV LDT
10.1.1.3 CREATE and GET CoreData
10.2 Quality of service requirements

10.3 Test requirements
10.4 Marking, labelling and packaging

11 Common features of unregulated TARV application services

11.1 Generic operational processes for the system
11.2 Common characteristics for instantiations of unregulated application services
11.3 Common sequence of operations for unregulated application services
11.4 Quality of service
11.5 Information security
11.6 Data naming content and quality
11.7 Software engineering quality systems
11.8 Quality monitoring station
11.9 Audits
11.10 Data access control policy
11.11 Approval of IVSs and service provider
11.12 Approval of road side sensors

12 Declaration of patents and intellectual property

Annex A (informative) Application examples

A.1 General
A.2 Regulated heavy vehicle stability monitoring services as unregulated application
A.2.1 Use case definitions

Annex B (informative) Vehicle stability monitoring sensor examples

B.1 General
B.2 Vehicle stability monitoring sensor
B.2.1 On board type sensors
B.2.2 Road side type sensors
