ISO 5011:2020 (E)

Inlet air cleaning equipment for internal combustion engines and compressors — Performance testing

Contents

Foreword

1 Scope

2 Normative references

3 Terms, definitions and symbols

3.1 Terms and definitions
3.2 Symbols

4 Measurement accuracy and standard conditions

4.1 Measurement accuracy and precision
4.2 Standard conditions

5 Test materials and test conditions

5.1 Test dust
5.1.1 Grade
5.1.2 Preparation
5.2 Test oil for oil bath air cleaners
5.3 Absolute filter materials
5.3.1 Filter media
5.3.2 Validation of absolute filter media efficiency, Ea
5.4 Absolute filter mass
5.5 Temperature and humidity

6 Test procedure for dry-type air cleaners for automotive applications

6.1 General
6.2 Test equipment
6.3 Restriction and differential pressure test
6.4 Efficiency test
6.4.1 Purpose
6.4.2 Types
6.4.3 Test procedure — Absolute filter method
6.4.4 Test procedure — Direct weighing method
6.5 Capacity test
6.6 Filter element pressure collapse test
6.7 Variable air flow test
6.8 Presentation of data

7 Test procedure for dry-type air cleaners for industrial applications

7.1 General
7.2 Test equipment
7.3 Restriction and differential pressure test
7.4 Initial efficiency test procedure — Absolute filter method
7.5 Full-life efficiency and capacity test
7.5.1 Air cleaner dust capacity
7.5.2 Test procedure — Absolute filter method
7.5.3 Test procedure — Direct weighing method
7.6 Presentation of data
7.7 Scavenged air cleaner performance test
7.7.1 General
7.7.2 Additional equipment
7.7.3 Restriction and differential pressure test

7.7.4 Full-life efficiency and capacity test
7.7.5 Presentation of data
7.8 Precleaner performance test
7.8.1 Precleaner dust removal
7.8.2 Precleaner efficiency
7.8.3 Presentation of data
7.9 Secondary element test procedure
7.9.1 General
7.9.2 Specific efficiency test
7.9.2.1 Preparation
7.9.2.2 Test procedure
7.9.3 Expression of results

8 Test procedure for industrial applications of oil bath air cleaners

8.1 General
8.2 Test equipment and conditions
8.3 Restriction and differential pressure test
8.4 Oil carry-over test
8.5 Full life efficiency and capacity test
8.6 Recovery test
8.7 Presentation of data

Annex A (normative) Explanation of restriction, differential pressure and pressure loss of an air cleaner

Annex B (normative) Test equipment

Annex C (informative) Report sheet on performance testing of air cleaner equipment according to ISO 5011 — Automotive application

Annex D (informative) Report sheet on performance testing of air cleaner equipment according to ISO 5011 — Industrial application

Annex E (informative) Presentation of results — Air cleaner restriction/differential pressure versus flow

Annex F (informative) Presentation of results — Air cleaner capacity

Annex G (normative) Airflow and resistance corrections to standard conditions

Annex H (normative) Penetration sensitivity

Page count: 50
