

ISO 19206-3:2021 (E)

Road vehicles — Test devices for target vehicles, vulnerable road users and other objects, for assessment of active safety functions — Part 3: Requirements for passenger vehicle 3D targets

Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
4	Abbreviated terms
5	Vehicle target specifications
5.1	Vehicle classes and target applicability
5.2	Reference dimensional measurements
5.3	Safety considerations
5.4	Repairability and robustness
5.5	Environmental conditions
5.6	Reference coordinate system
5.7	Speed classes
6	Vehicle target response to sensing technologies
6.1	General
6.2	Optical requirements
6.2.1	General
6.2.2	Reference measurements
6.2.3	Stability of dimensions for optical recognition
6.2.4	Viewing angles
6.2.5	Features related to optical requirements
6.3	Radar requirements
6.3.1	Reference measurements of radar properties
6.3.2	Reference measurements
6.3.3	Radar cross section, static measurements and requirements
6.3.4	Radar recognition features of vehicle target
6.3.5	Stability of dimensions for radar recognition
6.4	Thermal requirements for Far Infrared vision systems
6.4.1	General
6.4.2	Reference measurements
6.4.3	Thermal characteristics
6.5	Calibration
6.6	Field verification
7	Motion and positioning during test for VT including target carrier system
7.1	General requirements
7.2	Longitudinal positioning
7.2.1	Speed range for operation
7.2.2	Accelerations
7.3	Lateral positioning
7.3.1	General
7.3.2	Yaw rate
7.3.3	Lateral position
7.3.4	Lateral acceleration

- 7.3.5 Turning diameter
- 7.4 Vertical positioning
- 7.4.1 General
- 7.4.2 Pitch angle
- 7.4.3 Vertical motions

Annex A (informative) Vehicle classes and dimensions

- A.1 Overview of vehicle sizes and classes
- A.2 Measurements on representative vehicles

Annex B (normative) Visual and near infrared sensor-specific recognition properties and measurements

- B.1 General
- B.2 Visual and near infrared properties
- B.2.1 Overall visual properties
- B.2.2 License plate
- B.2.3 Lighting and retroreflectors
- B.2.4 Near infrared properties
- B.3 Measurement of IR reflectivity
- B.3.1 Equipment and calibration
- B.3.2 Measurement setup

Annex C (normative) Radar-specific recognition properties and measurements

- C.1 General
- C.2 Radar properties
- C.2.1 General
- C.2.2 Radar cross-section, RCS
- C.2.2.1 RCS characteristics
- C.2.2.2 Determination of RCS boundaries
- C.2.2.3 RCS boundaries for fixed-range, variable viewing angle measurement
- C.2.2.4 RCS boundaries for fixed viewing angle, variable range measurement
- C.2.2.5 Spatial RCS boundaries using the angle-penetration method
- C.3 Radar measurements
- C.3.1 General
- C.3.2 Measurement setup
- C.3.2.1 Radar sensor and fixture
- C.3.2.2 Sensor calibration equipment
- C.3.2.3 Test environment
- C.3.3 Measurement scenarios
- C.3.3.1 Scenario 1 — Fixed-range measurement or viewing angle scan
- C.3.3.1.1 Spatial RCS calculation using fixed-range measurement data
- C.3.3.2 Scenario 2 — Fixed-angle scans
- C.3.4 Calibration scenario

Annex D (informative) Measurement of position, speed and acceleration of the vehicle target

Annex E (informative) Field verification of vehicle target properties

- E.1 General
- E.2 Field verification procedure using fixed-range measurements
- E.3 Field verification procedure using fixed-angle measurements
