ISO/TR 21934-1:2021 (E)

Road vehicles — Prospective safety performance assessment of pre-crash technology by virtual simulation — Part 1: State-of-the-art and general method overview

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

4.1 Symbols
4.2 Abbreviated terms

5 Evaluation objective and baseline of assessment

5.1 Definition of the evaluation objective
5.2 Establishment of baseline

6 Input data

6.1 General
6.2 Active safety technology related data
6.3 Accident data
6.4 Data from naturalistic driving studies and field operation test
6.5 Infrastructure and traffic data
6.6 Data from tests in controlled environments

7 Implementation of virtual simulation

7.1 General
7.2 Simulation framework
7.3 Simulation tool
7.4 Simulation models
7.4.1 Vehicle model
7.4.2 Safety technology model
7.4.2.1 Sensor model
7.4.2.2 Function logic model
7.4.3 Environment model
7.4.4 Traffic situation model
7.4.5 Traffic model
7.4.6 Driver model
7.4.7 Collision model
7.5 Simulation control

8 Estimating safety technology safety performance

9 Validation and verification

10 Practical experience

10.1 General
10.2 Establishment of baseline
10.3 Simulation framework
10.4 Comparative study of different simulation tools
10.5 Estimating the safety performance

10.6 Validation and verification

11 Conclusions and limitations

12 Outlook

12.1 General
12.2 Automated driving
12.3 V2X technologies

Annex A (informative) List of tools

Annex B (informative) Input and output of simulation models

Page count: 43
