ISO/TR 23255:2022-04 (E)

Intelligent transport systems - Architecture - Applicability of data distribution technologies within ITS

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Abbreviated terms 2

5 Transitioning from traditional to cooperative thinking 4
5.1 General 4
5.1.1 Need for data exchanges 4
5.1.2 Data distribution functionality 5
5.2 Systems engineering process 6
5.2.1 Conceptualization 6
5.2.2 System architecture 6
5.2.3 System design 6
5.3 Traditional silos versus cooperative approaches 7

6 Summary of needs and considerations 7
6.1 General 7
6.2 Types of information flows 7
6.2.1 General 7
6.2.2 Non-emergency information sharing 8
6.2.3 Emergency information sharing 8
6.2.4 Control flows 8
6.2.5 Interrogatives 8
6.2.6 Local exchanges 8
6.3 Characteristics 8
6.4 Solution characteristics 9
6.4.1 General 9
6.4.2 Architectural topology 9
6.4.3 Technology maturity and deployment characteristics 13
6.5 Objective analysis 15
6.5.1 General 15
6.5.2 Protocols tested 15
6.5.3 Protocols considered and not analysed 16
6.5.4 Protocols considered and investigated but not tested 17
6.5.5 Summary 17

7 Summary of analysis results 18
7.1 General 18
7.2 Quantitative results 18
7.2.1 General 18
7.2.2 Many2One 18
7.2.3 One2Many 20
7.2.4 10 to Many 21
7.2.5 50 to Many 23

7.2.6 N to N 24
7.2.7 Latency as a function of completion percentage 29
7.2.8 Other tests 30
7.3 Qualitative lessons learned 31

8 Summary of protocol characteristics and applicability to ITS 31

9 Conclusion 35

Annex A (informative) Test environment 37

Bibliography 40
