

ISO/TR 23255:2022-04 (E)

Intelligent transport systems - Architecture - Applicability of data distribution technologies within ITS

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviated terms	2
5	Transitioning from traditional to cooperative thinking	4
5.1	General	4
5.1.1	Need for data exchanges	4
5.1.2	Data distribution functionality	5
5.2	Systems engineering process	6
5.2.1	Conceptualization	6
5.2.2	System architecture	6
5.2.3	System design	6
5.3	Traditional silos versus cooperative approaches	7
6	Summary of needs and considerations	7
6.1	General	7
6.2	Types of information flows	7
6.2.1	General	7
6.2.2	Non-emergency information sharing	8
6.2.3	Emergency information sharing	8
6.2.4	Control flows	8
6.2.5	Interrogatives	8
6.2.6	Local exchanges	8
6.3	Characteristics	8
6.4	Solution characteristics	9
6.4.1	General	9
6.4.2	Architectural topology	9
6.4.3	Technology maturity and deployment characteristics	13
6.5	Objective analysis	15
6.5.1	General	15
6.5.2	Protocols tested	15
6.5.3	Protocols considered and not analysed	16
6.5.4	Protocols considered and investigated but not tested	17
6.5.5	Summary	17
7	Summary of analysis results	18
7.1	General	18
7.2	Quantitative results	18
7.2.1	General	18
7.2.2	Many2One	18
7.2.3	One2Many	20
7.2.4	10 to Many	21
7.2.5	50 to Many	23

7.2.6	N to N	24
7.2.7	Latency as a function of completion percentage	29
7.2.8	Other tests	30
7.3	Qualitative lessons learned	31
8	Summary of protocol characteristics and applicability to ITS	31
9	Conclusion	35
	Annex A (informative) Test environment	37
	Bibliography	40
