ISO/TS 24315-3:2025-10 (E)

Intelligent transport systems - Management of electronic traffic regulations (METR) - Part 3: System of systems requirements and architecture (SoSR)

Contents

Page

Foreword ..... **v**

Introduction ..... **vi**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Abbreviated terms **1**

5 Overview **2**

5.1 METR purpose 2

5.2 METR scope 3

5.3 Management of electronic traffic regulations (METR) overview 3

5.3.1 Functional view 3

5.3.2 Physical view 4

5.4 Assumptions and dependencies 8

5.4.1 Assumptions 8

5.4.2 Dependencies 9

5.5 Traceability conventions 9

5.6 Naming conventions 11

5.7 Traceability and conformance 11

6 System of systems requirements **11**

6.1 General 11

6.2 Input requirements 12

6.2.1 Information flow: legal rules 12

6.2.2 Information flow: coordination 12

6.2.3 Information flow: discrepancy information 13

6.2.4 Information flow: traffic control devices (TCD) status 14

6.3 Output requirements 15

6.3.1 Information flow: audit information 15

6.3.2 Information flow: coordination 16

6.3.3 Information flow: information 16

6.3.4 Information flow: information for adaptation 18

6.4 Functional requirements 20

6.4.1 Verification of METR rules 20

6.4.2 METR information storage requirements 20

6.5 Applicable intelligent transport system (ITS) station unit requirements 21

6.5.1 Support services 21

6.5.2 Timeliness 23

6.5.3 Filtering 23

6.5.4 Open specification 23

6.5.5 Backwards compatibility 24

6.5.6 Forward compatibility 24

6.5.7 Language neutral 24

6.6 Information requirements 24

6.6.1 General 24

6.6.2 Feature catalogue 24

6.6.3 METR information 24

6.6.4 Information content 25

6.6.5 Information meta-data 26
6.6.6 Observable transport rule attributes 26
6.6.7 Additional transport rule attributes 27
6.6.8 Auditing attributes 28
6.7 Efficient exchange constraint 28

7 Actor responsibilities 28
7.1 Rule maker responsibilities 28
7.1.1 Maintain rules 28
7.1.2 Define location accurately 28
7.2 User responsibilities 28
7.2.1 Acquire rules before travelling 28
7.2.2 Identify necessary rule criteria 28
7.2.3 Obtain necessary supporting data 28
7.2.4 Process rules 29
7.2.5 Identify discrepancies 29
7.2.6 Mapping 29
7.2.7 Determine user's location 29
7.2.8 Determine environmental conditions 29
7.3 Implementer responsibilities 29
7.4 Auditor responsibilities 29

8 System-level reference architecture 29
8.1 Overview 29
8.2 Physical view 30
8.2.1 Mapping to functional view 30
8.2.2 Centralized information distribution service package 31
8.2.3 Localized information distribution 36
8.2.4 Discrepancy management 40
8.2.5 Auditing service package 44
8.2.6 Service registration and discovery 46
8.2.7 Security enrolment and credentials management 47
8.2.8 Core authorization 48
8.2.9 System monitoring 49
8.2.10 Physical objects 50
8.2.11 Information flows 52
8.2.12 Cybersecurity overview 58
8.3 Enterprise view 59
8.3.1 Overview 59
8.3.2 Enterprise objects 63
8.3.3 Agreements and expectation definitions 70
8.3.4 Role definitions 73
8.3.5 Resources 73

9 Variables 74
9.1 General 74
9.2 catalogueUpdateInterval 74
9.3 criteriaLatencyTime 74
9.4 distributionResponseTime 74
9.5 informationRefreshDuration 74
9.6 metrRecoveryTime 74
9.7 metrResponseTime 75
9.8 metrUpdateCycle 75
9.9 metrUpTimePercent 75
9.10 provisionLatency 75
9.11 subscriptionRefreshTime 75
9.12 translationUpdateInterval 75

Annex A (informative) **Conformance 76**

Annex B (normative) **Diagram conventions 78**

Annex C (informative) **Possible deployments of role-based architecture 83**
