ISO/TR 12786:2026-07 (E)

Intelligent transport systems - Big data and artificial intelligence supporting intelligent transport systems - Use cases

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Abbreviated terms 4

5 Introduction to ITS-specific uses of big data technologies and artificial intelligence techniques 5
5.1 General 5
5.2 Intelligent transport systems (ITS) 6
5.2.1 General 6
5.2.2 ITS service domains 6
5.2.3 Main ITS stakeholders 7
5.3 Road safety 7
5.3.1 General 7
5.3.2 The safe system approach to road safety 8
5.3.3 Traditional road safety approaches and the safe system approach 8
5.3.4 Road safety management system 9
5.4 Big data technologies 9
5.4.1 General 9
5.4.2 Data characteristics 10
5.4.3 Data processing characteristics 10
5.4.4 Main big data stakeholders 10
5.5 Artificial intelligence (AI) 11
5.5.1 General 11
5.5.2 AI fields and techniques 11
5.5.3 Machine learning (ML) 12
5.5.4 Artificial neural networks (ANN) and deep learning (DL) 12
5.5.5 AI-enabled system functions 13
5.5.6 Main AI stakeholders 13
5.6 ITS-specific uses of big data technologies and AI techniques 13
5.6.1 General 13
5.6.2 ITS-specific application areas using big data technologies and AI techniques 13
5.6.3 Scenario settings for ITS using big data and AI 15
5.6.4 Key technical characteristics 15
5.6.5 Data characteristics 20
5.6.6 Main stakeholders 23
5.6.7 Classic models and AI models 24

6 Challenges of ITS-specific uses of big data technologies and artificial intelligence techniques 24
6.1 General 24
6.2 Barriers to adoption of big data technologies and AI techniques for intelligent transport systems 25

6.3 Other challenging aspects of ITS-specific uses of big data technologies and AI techniques ... 26
6.3.1 General ... 26
6.3.2 Responsibility, accountability and governance challenges ... 26
6.3.3 Management challenges ... 26
6.3.4 Societal challenges ... 27
6.3.5 Ethical challenges ... 27
6.3.6 Jurisdictional challenges ... 27
6.4 Spectrum of risk of ITS-specific uses of big data technologies and AI techniques ... 27
6.5 Safety, controllability, security, privacy protection, verifiability, transparency and explainability ... 28
6.5.1 General ... 28
6.5.2 Safety ... 29
6.5.3 Controllability ... 30
6.5.4 Security ... 30
6.5.5 Privacy protection ... 30
6.5.6 Verifiability ... 31
6.5.7 Transparency and explainability ... 32
6.6 Data availability, quality, interoperability, unwanted bias and fairness ... 32
6.6.1 General ... 32
6.6.2 Data availability ... 32
6.6.3 Quality ... 33
6.6.4 Interoperability ... 33
6.6.5 Unwanted bias and fairness ... 33
6.7 Challenges identified in the use cases ... 34

7 ITS-specific use cases that take advantage of big data technologies and AI techniques ... 35
7.1 General ... 35
7.2 Short descriptions of selected ITS-specific use cases ... 37
7.2.1 AI solution to estimate or predict congestion length (use case ITS-1) ... 37
7.2.2 Traffic signal control using artificial intelligence (use case ITS-2) ... 37
7.2.3 Real-time traffic signal optimization (use case ITS-3) ... 37
7.2.4 Transport information provision service for safe operation of automated driving buses in public transport (use case ITS-4) ... 37
7.2.5 Crowd-sourced AI dataset generation and model update (use case ITS-5) ... 37
7.2.6 Edge misbehaviour detection for V2X data reliability (use case ITS-6) ... 38
7.2.7 "TripPlans" for public-area mobile robots (PMRs): intended and actual (use case ITS-7) ... 38
7.2.8 Rules of the road discrepancy analysis (use case ITS-8) ... 38
7.2.9 Video and image analytics for infrastructure repairs (use case ITS-9) ... 38
7.2.10 Federated learning for distributed predictive quality of service in ITS (use case ITS-10) ... 38
7.2.11 Extract rules of the road from traffic regulation orders (use case ITS-11) ... 39
7.2.12 Recognition of road incidents from video streams (use case ITS-12) ... 39
7.2.13 Estimation of traffic queue length (use case ITS-13) ... 39
7.2.14 Pedestrian, cyclist and micro-mobility detection (use case ITS-14) ... 39
7.2.15 Safety metrics assessment (use case ITS-15) ... 39
7.2.16 Demand response transit network optimization (use case ITS-16) ... 39
7.2.17 Identification of unauthorized bus lane usage (use case ITS-17) ... 40
7.2.18 Prediction of multimodal corridor delays (use case ITS-18) ... 40
7.2.19 Multimodal corridor demand management (use case ITS-19) ... 40
7.2.20 Real-time demand responsive traffic management and control (use case ITS-20) ... 40
7.2.21 Asset condition monitoring (use case ITS-21) ... 40
7.2.22 Work zone safety and information dissemination (use case ITS-22) ... 41
7.2.23 Port operations and planning (use case ITS-23) ... 41
7.2.24 Crash and emergency detection (use case ITS-24) ... 41
7.2.25 Predictive asset maintenance (use case ITS-25) ... 41
7.2.26 Work zone management (use case ITS-26) ... 41
7.2.27 Distracted driver behaviour detection (use case ITS-27) ... 41
7.2.28 Environmental mapping and guidance (use case ITS-28) ... 42
7.2.29 AI-powered safety monitoring and alerts (use case ITS-29) ... 42
7.2.30 AI-powered assistive robotics (use case ITS-30) ... 42

Annex A (informative) Compilation of use cases 43

Annex B (informative) Template used to collect ITS-specific use cases 61
