ISO 13232-2:2005-12 (E)

Motorcycles - Test and analysis procedures for research evaluation of rider crash protective devices fitted to motorcycles - Part 2: Definition of impact conditions in relation to accident data

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Definitions 2

4 Requirements 2
4.1 Impact variables 2
4.2 Standardized accident configurations 3
4.3 Impact configurations for full-scale tests 3

5 Analysis methods 6
5.1 Using accident data to determine frequency of occurrence of various impact configurations 6
5.2 Using accident data to determine frequency of injury by body region and injury type of various impact configurations 10

6 Documentation and reporting 11

Annex A (normative) Motorcycle accident report 12

Annex B (normative) Resulting frequency of occurrence for the combined Los Angeles and Hannover databases 15

Annex C (normative) Example accident data 18

Annex D (normative) Resulting frequency of injury by body region and injury type for the combined Los Angeles and Hannover databases 36

Annex E (informative) Frequency of occurrence data in non-SI units 39

Annex F (informative) Rationale for ISO/DIS 13232-2 44

Figures Figure 1 -- Target impact geometries at first MC/OV contact for seven required impact configurations 4

Figure 2 -- OV contact point codes 6

Figure 3 -- MC contact point codes 6

Figure 4 -- Relative heading angle 6

Figure 5 -- Diagram of relative heading angle (angle of OV x axis relative to MC x axis, regardless of relative positions of OV and MC) with code numbers 8

Figure B.1 -- Geometries occurring for 200 combined Los Angeles and Hannover impact configurations involving 501 accidents 16

Figure F.1 -- Distribution of raw relative heading angles for Los Angeles and Hannover accidents .. 50

Figure F.2 -- Examples of geometry reclassification 52

Figure F.3 -- Examples of removed configurations 52

Tables Table 1 -- Impact configurations for preliminary assessment 5

Table 2 -- Heading angle of OV relative to MC 7

Table 3 -- OV and MC speed 8

Table 4 -- Reclassification for left side OV contact point codes 9

Table 5 -- Reclassification of geometry codes 9

Table 6 -- List of removed configurations 10

Table A.1 -- Injury body region codes 14

Table A.2 -- Injury type codes 14

Table B.1 -- Opposing vehicle and motorcycle speeds and frequencies of occurrence for 200 combined Los Angeles and Hannover impact configurations 17

Table C.1 -- Legend for Los Angeles and Hannover databases 19

Table C.2 -- Los Angeles data 20

Table C.3 -- Hannover data 29

Table D.1 -- Head injury configurations (helmeted concussions, AIS 2) involving 67 accidents 36

Table D.2 -- Lower leg injury configurations (fractures, AIS 2) involving 80 accidents 37

Table D.3 -- Upper leg injury configurations (fractures, AIS 2) involving 37 accidents 38

Table E.1 -- Opposing vehicle and motorcycle speeds and frequencies of occurrence for 200 combined Los Angeles and Hannover impact configurations 40

Table E.2 -- Head injury configurations (helmeted concussions, AIS 2) involving 67 accidents 41

Table E.3 -- Lower leg injury configurations (fractures, AIS 2) involving 80 accidents 42

Table E.4 -- Upper leg injury configurations (fractures, AIS 2) involving 37 accidents 43
