Foreword 4

Introduction 5

1 Scope 5
1.1 Interfaces Specified by this Technical Specification 5
1.1.1 Business Context 5
1.1.2 SIRI Communications 6
1.1.3 SIRI Functional Services 7
1.2 Use of the SIRI standard 7
1.3 Limitations on SIRI and Possible Future Developments 8

2 Normative references 9

3 Terms and definitions 9
3.1 Transport Related Terms 9
3.2 Communications & Software Concepts 19
3.3 Types of Reference Data Used in SIRI 27
3.3.1 General 27
3.3.2 Date and time format 28
3.3.3 Location coordinate system 29
3.3.4 National language of text elements 30
3.3.5 Participant (information provider) identification 30
3.3.6 Participant pair identification (service participant pair code) 30
3.3.7 Point and place references 31
3.3.8 Vehicle journey references 33
3.3.9 Line, and direction references 34
3.3.10 Stop sequence references and circular journeys 34
3.3.11 Schedule version references 36
3.3.12 Product category references 36
3.3.13 Vehicle and stop feature references 41
3.3.14 Service features 42
3.3.15 Situation references 44
3.3.16 Summary of Data Reference Scopes 44
3.3.17 Transmodel Compliant Models 45
3.3.18 Modelling Vehicle Journeys in SIRI 46

4 Symbols and abbreviations 53
4.1 General 53
4.2 Representation of XML model elements in Text 54
4.3 Representing Relationships in SIRI 54
4.4 Notation for XML model structures of SIRI messages 55
4.4.1 General 55
4.4.2 Organisational Group label 55
4.4.3 Element Name 55
4.4.4 Multiplicity & Choice (Min:Max) 56
4.4.5 Data Type 56
4.4.6 Description 56
4.5 Notation for Diagrams 56

Annex A (informative) **Checklist for Implementing SIRI** 57
A.1 Usage of the DSRC application layer 57
A.2 Legal and Commercial Issues 57
A.3 Functional Aspects 57
A.3.1 Main Scope 57
A.3.2 Service Configuration 58
A.3.3 Reference data 58
A.3.4 Error Handling 59

A.4 Operational Aspects **59**
A.4.1 Systems Management **59**
A.4.2 Provisioning **59**

Annex B (informative) **Business Context** **60**
B.1 Purpose of This Section **60**
B.2 Business Model **61**
B.2.1 Passenger Transport Operations **61**
B.2.2 Organisations **63**
B.3 Use of information in Public Transport **63**
B.3.1 Overview **63**
B.3.2 Data Ownership **63**
B.3.3 Temporal Considerations **66**
B.3.4 Information Security **67**
B.3.5 Regulatory Issues **67**
B.4 Use Cases for this Technical Specification **67**
B.4.1 Introduction **67**
B.4.2 Use Case: Provision of Service Information to Passengers **68**
B.4.3 Use Case: Journey Planning **69**
B.4.4 Use Case: Facilitating Connections for Passengers **70**
B.4.5 Use Case: Fleet and Network Management **71**
B.4.6 Use Case: General Business Communications **71**
B.5 SIRI System Model **72**
B.5.1 Modularisation **72**
B.5.2 PT Infrastructure Management Module **72**
B.5.3 Transport Infrastructure Management Module **72**
B.5.4 PT Scheduling Module **73**
B.5.5 PT Integration Module **73**
B.5.6 Traffic Management Control Centre **73**
B.5.7 PT Operational Control **74**
B.5.8 PT Journey Planner **75**
B.5.9 Passenger Information **75**

Annex C (informative) **Background and Mapping of Some Current Implementations to SIRI** **76**
C.1 Introduction **76**
C.2 SIRI origins **76**
C.2.1 VDV453/VDV454 ..... **76**
C.2.2 TRIDENT **76**
C.2.3 RTIG-XML **77**
C.2.4 CEN TC278 WG3 SG7 ..... **78**
C.3 Deployment Example – Berlin **79**
C.4 Deployment Example – Hamburg **80**
C.5 Deployment Example – West Yorkshire **80**
C.6 Deployment Example – Czech Republic **81**
C.7 Deployment Example – Copenhagen **82**
C.8 Deployment example – Île-de-France **83**

Bibliography **85**
