

# ISO 20266:2018 (E)

## Paints and varnishes — Determination of image clarity (degree of sharpness of reflected or transmitted image)

---

### Contents

|         |   |
|---------|---|
|         | Foreword  |
|         | Introduction                                      |
| 1       | Scope   |
| 2       | Normative references                              |
| 3       | Terms and definitions                             |
| 4       | Principle   |
| 5       | Limitations                                       |
| 6       | Apparatus   |
| 7       | Sampling  |
| 8       | Test specimen                                     |
| 8.1     | Substrate   |
| 8.2     | Preparation and coating                           |
| 8.3     | Drying and conditioning                           |
| 8.4     | Thickness of coating                              |
| 8.5     | Specimen size                                     |
| 9       | Procedure   |
| 10      | Calculation                                       |
| 11      | Test report                                       |
| Annex A | (informative) Example of determination            |
| A.1     | Selection of optical mask width                   |
| A.2     | Example of image clarity measurement (reflection) |
| A.3     | Example of painted plastic sheets                 |
| Annex B | (informative) Precision                           |
| B.1     | General   |
| B.2     | Materials   |
| B.3     | Instrumentation                                   |
| B.4     | Repeatability                                     |
| B.5     | Reproducibility                                   |
