

ISO 10927:2018 (E)

Plastics — Determination of the molecular mass and molecular mass distribution of polymer species by matrix-assisted laser desorption/ionization time-of-flight mass spectrometry (MALDI-TOF-MS)

Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
4	Principle
5	Reagents
5.1	Matrices
5.2	Solvents
5.3	Salts
5.4	Molecular mass standards
6	Apparatus
6.1	General
6.2	Sample introduction chamber/target
6.3	Laser source
6.4	Flight tube
6.5	Detector
6.6	Data recording
6.7	Data handling
7	Procedure
7.1	General
7.2	Sample preparation
7.2.1	General
7.2.2	Preparation of polymer/matrix/salt solutions
7.2.3	Deposition of the sample on the sample plate (target)
7.2.3.1	General
7.2.3.2	Hand-spotting (air-dried droplet technique)
7.2.3.3	Spray technique
7.2.3.4	Grinding (solvent-less preparation)
7.2.4	Preparation and spotting of biopolymer/matrix solutions
7.3	Instrument settings
7.4	Recording spectra
8	Data acquisition and processing
8.1	General
8.2	Calibration
8.2.1	General
8.2.2	Calibration of mass axis using synthetic-polymer standards
8.2.2.1	Selection of standards
8.2.2.2	Sample preparation
8.2.3	Calibration of mass axis using biopolymer standards
8.2.4	Self-calibration method
8.3	Generation of calibration curve
8.4	Signal intensity axis calibration

9 Expression of results

- 9.1 Calculation of molecular mass distribution**
- 9.2 Calculation of the average molecular masses**

10 Precision

11 Test report

Annex A (normative) Calibrants

Annex B (informative) Precision data

Page count: 13
