ISO/TS 9124:2025-12 (E)

Paints and varnishes - Thermal performance of paint films - Determination of solar irradiation penetration ratio with heat flow meter

Contents

Page

Foreword ... **iv**

Introduction ... **v**

1 Scope ... **1**

2 Normative references ... **1**

3 Terms and definitions ... **2**

4 Symbols, definitions and units ... **2**

5 Measurement principle ... **3**

6 Apparatus ... **4**
6.1 Composition of apparatus ... 4
6.2 Solar simulator ... 5
6.3 Climatic chamber (external airflow path) ... 5
6.4 Measuring unit ... 6

7 Test method ... **6**
7.1 Sampling ... 6
7.2 Inspection and preparation of sample for test ... 6
7.3 General conditions for test ... 6
7.4 Setting the external surface heat transfer coefficient and adjusting the heat flux of solar irradiation ... 7
7.4.1 Setting the external surface heat transfer coefficient ... 7
7.4.2 Adjusting heat flux of solar irradiation ... 7
7.5 Verification method ... 8
7.5.1 Verification plate ... 8
7.5.2 Environmental conditions ... 9
7.5.3 Verification ... 9
7.6 Measurement ... 9
7.6.1 Parameters to be measured ... 9
7.6.2 Measurement method ... 10
7.7 Calculation method ... 11
7.8 Precision ... 11

8 Test report ... **11**

Annex A (normative) **Setting of external surface heat transfer coefficient** ... **13**

Annex B (informative) **Theoretical calculation of heat balance for the heat flow rate through the test specimen** ... **17**

Annex C (informative) **Correlation between solar reflectance and solar irradiation penetration ratio** ... **22**

Annex D (informative) **Heat flux measurements without solar irradiation** ... **23**

Bibliography ... **24**
