

DIN EN ISO 13370:2008-04 (E)

Thermal performance of buildings - Heat transfer via the ground - Calculation methods (ISO 13370:2007)

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms, definitions, symbols and units	6
3.1	Terms and definitions	6
3.2	Symbols and units	7
4	Methods of calculation	7
5	Thermal properties	8
5.1	Thermal properties of the ground	8
5.2	6 Internal temperature and climatic data	9
6.1	Internal temperature	9
6.2	Climatic data	9
7	Thermal transmittance and heat flow rate	10
7.1	Thermal transmittance	10
7.2	Thermal bridges at edge of floor	10
7.3	Calculation of heat flow rate	10
7.4	Effect of ground water	10
7.5	Special cases	11
8	Parameters used in the calculations	11
8.1	Characteristic dimension of floor	11
8.2	Equivalent thickness	12
9	Calculation of thermal transmittances	12
9.1	Slab-on-ground floor	12
9.2	Suspended floor	13
9.3	Heated basement	16
9.4	Unheated basement	18
9.5	Partly heated basement	18
Annex A (normative) Calculation of ground heat flow rate		19
Annex B (normative) Slab-on-ground with edge insulation		24
Annex C (normative) Heat flow rates for individual rooms		28
Annex D (normative) Application to dynamic simulation programmes		29
Annex E (normative) Ventilation below suspended floors		30
Annex F (informative) Periodic heat transfer coefficients		33

Annex G (informative) Thermal properties of the ground	37
Annex H (informative) The influence of flowing ground water	39
Annex 1 (informative) Slab-on-ground floor with an embedded heating or cooling system	41
Annex J (informative) Cold stores	42
Annex K (informative) Worked examples	43
Bibliography	52
Thermal properties of building materials	9
95.3 Surface resistances
