DIN EN ISO 12241:2008-11 (E)

Thermal insulation for building equipment and industrial installations - Calculation rules (ISO 12241:2008)

Contents

Page

Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms, definitions and symbols 5
3.1 Terms and definitions 5
3.2 Definition of symbols 6
3.3 Subscripts 7

4 Calculation methods for heat transfer 7
4.1 Fundamental equations for heat transfer 7
4.2 Surface temperature 18
4.3 Prevention of surface condensation 21
4.4 Determination of total heat flow rate for plane walls, pipes and spheres 24

5 Calculation of the temperature change in pipes, vessels and containers 25
5.1 Longitudinal temperature change in a pipe 25
5.2 Temperature change and cooling times in pipes, vessels and containers 26

6 Calculation of cooling and freezing times of stationary liquids 26
6.1 Calculation of the cooling time for a given thickness of insulation to prevent the freezing of water in a pipe 26
6.2 Calculation of the freezing time of water in a pipe 28

7 Determination of the influence of thermal bridges 29
7.1 General 29
7.2 Calculation of correction terms for plane surfaces 30
7.3 Calculation of correction terms for pipes 30

8 Underground pipelines 31
8.1 General 31
8.2 Calculation of heat loss (single line) without channels 31
8.3 Other cases 33

Annex A (normative) Thermal bridges in pipe insulation 34

Annex B (informative) Projecting thermal bridges of roughly constant cross-section 37

Annex C (informative) Examples 42

Bibliography 49
