Determination of particle size distribution - Differential electrical mobility analysis for aerosol particles

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Terms and definitions	1
3	Symbols	4
4	General principle	5
4.1	Particle size classification with the DEMC	5
4.2	Relationship between electrical mobility and particle size	6
4.3	Measurement and data inversion	7
4.4	Transfer function of the DEMC	8
4.5	The charge distribution function	8
5	System and apparatus	9
5.1	General configuration	9
5.2	Components	10
6	Measurement procedures	11
6.1	Setup and preparation of the instrument	11
6.2	Pre-measurement checks	14
6.3	Measurement	14
6.4	Maintenance	15
7	Periodic tests and calibrations	16
7.1	Overview	16
7.2	Leak test	16
7.3	Zero tests	17
7.4	Flow meter calibration	17
7.5	Voltage calibration	17
7.6	Particle charge conditioner integrity test	18
7.7	Calibration for size measurement	18
7.8	Size resolution test	19
7.9	Number concentration calibration	20
8	Reporting of results	20
Annex A (informative) Particle charge conditioners and charge distributions		21
Annex B (informative) Particle detectors		29
Annex C (informative) Slip correction factor		33
Annex D (informative) Data inversion		37
Annex E (informative) Cylindrical DEMC		43
Annex F (informative) Size calibration of a DMAS with step-wise voltage change using particle size standards		49
Annex G (informative) Uncertainty		52
Bibliography		55
