ISO/TR 12910:2010-04 (E)

Light-frame timber construction - Comparison of four national design documents

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Document design principles 1
2.1 Basic principles 1
2.2 Compliance through pre-engineered solutions 2
2.3 Design requirements matched to risk level 2
2.4 Relationship to engineering design 3
2.5 Evolving understanding of load-resistance interaction 3

3 Coverage and limitations 3
3.1 General 3
3.2 Definition of light-frame construction 4
3.3 Prescriptive and performance-based approaches 4
3.4 Integration of national code provisions 4
3.5 Scope of structural design 5
3.6 Beyond structural requirements, such as durability 5

4 Loads and load factors 6
4.1 General 6
4.2 Basic design framework and philosophy 6
4.3 Load comparisons 6

5 Material specifications 7
5.1 General 7
5.2 Product standards 7
5.3 Proprietary wood products 7

6 Member design 7
6.1 General 7
6.2 Member vs. system design 8
6.3 Roofs 8
6.4 Walls 9
6.5 Floors 9

7 Lateral load systems design 9
7.1 General 9
7.2 Linking lateral design to analysis models 9
7.3 Load action assumptions 10
7.4 Uplift design 10
7.5 Racking and overturning design 11
7.6 Building plan irregularities 11
7.7 Wall openings 11
7.8 Elevation irregularities 12

8 Connection design 12
8.1 General 12
8.2 Fastener schedules 12
8.3 Proprietary connections 13

9 Other 13
9.1 Miscellaneous 13
9.2 Definitions of terminology 13

Annex A (informative) Comparison chart 15
