DIN EN 1996-1-1:2010-12 (E)

Eurocode 6: Design of masonry structures - Part 1-1: General rules for reinforced and unreinforced masonr y structures (includes Corrigendum AC:2009)

Contents

Page

Background to the Eurocode programme 7

Status and field of application of Eurocodes 8

National Standards implementing Eurocodes 9

Links between Eurocodes and harmonised technical specifications (ENs and ETAs) for products 9

1 General 11
1.1 Scope 11
1.1.1 Scope of Eurocode 6 11
1.1.2 Scope of Part 1-1 of Eurocode 6 11
1.2 Normative references 13
1.2.1 General 13
1.2.2 Reference standards 13
1.3 Assumptions 14
1.4 Distinction between principles and application rules 14
1.5 Terms and Definitions 15
1.5.1 General 15
1.5.2 Terms relating to masonry 15
1.5.3 Terms relating to strength of masonry 15
1.5.4 Terms relating to masonry units 16
1.5.5 Terms relating to mortar 17
1.5.6 Terms relating to concrete infill 18
1.5.7 Terms relating to reinforcement 18
1.5.8 Terms relating to ancillary components 18
1.5.9 Terms relating to mortar joints 19
1.5.10 Terms relating to wall types 19
1.5.11 Miscellaneous terms 20
1.6 Symbols 21

2 Basis of design 27
2.1 Basic requirements 27
2.1.1 General 27
2.1.2 Reliability 27
2.1.3 Design working life and durability 27
2.2 Principles of limit state design 27
2.3 Basic variables 28
2.3.1 Actions 28
2.3.2 Design values of actions 28
2.3.3 Material and product properties 28
2.4 Verification by the partial factor method 28
2.4.1 Design values of material properties 28
2.4.2 Combination of actions 28
2.4.3 Ultimate limit states 28
2.4.4 Serviceability limit states 29
2.5 Design assisted by testing 29

3 Materials 30
3.1 Masonry Units 30
3.1.1 Types and grouping of masonry units 30

3.1.2 Properties of masonry units -compressive strength 32
3.2 Mortar 32
3.2.1 Types of masonry mortar 32
3.2.2 Specification of masonry mortar 32
3.2.3 Properties of mortar 33
3.3 Concrete infill 33
3.3.1 General 33
3.3.2 Specification for concrete infill 33
3.3.3 Properties of concrete infill 33
3.4 Reinforcing steel 34
3.4.1 General 34
3.4.2 Properties of reinforcing steel bars 34
3.4.3 ~Properties of bed joint reinforcementTM 34
3.5 Prestressing steel 35
3.6 Mechanical properties of masonry 35
3.6.1 Characteristic compressive strength of masonry 35
3.6.2 Characteristic shear strength of masonry 38
3.6.3 Characteristic flexural strength of masonry 40
3.6.4 Characteristic anchorage strength of reinforcement 42
3.7 Deformation properties of masonry 43
3.7.1 Stress-strain relationship 43
3.7.2 Modulus of elasticity 44
3.7.3 Shear modulus 44
3.7.4 Creep, moisture expansion or shrinkage and thermal expansion 45
3.8 Ancillary components 45
3.8.1 Damp proof courses 45
3.8.2 Wall ties 45
3.8.3 Straps, hangers and brackets 46
3.8.4 Prefabricated lintels 46
3.8.5 Prestressing devices 46

4 Durability 46
4.1 General 46
4.2 Classification of environmental conditions 46
4.3 Durability of masonry 46
4.3.1 Masonry units 46
4.3.2 Mortar 46
4.3.3 Reinforcing steel 46
4.3.4 Prestressing steel 48
4.3.5 Prestressing devices 49
4.3.6 Ancillary components and support angles 49
4.4 Masonry below ground 49

5 Structural analysis 49
5.1 General 49
5.2 Structural behaviour in accidental situations (other than earthquakes and fire) 50
5.3 Imperfections 50
5.4 Second order effects 51
5.5 Analysis of structural members 51
5.5.1 Masonry walls subjected to vertical loading 51
5.5.2 Reinforced masonry members subjected to vertical loading 57
5.5.3 Masonry shear walls subjected to shear loading 60
5.5.4 Reinforced masonry members subjected to shear loading 62
5.5.5 Masonry walls subjected to lateral loading 62

6 Ultimate Limit State 64
6.1 Unreinforced masonry walls subjected to mainly vertical loading 64
6.1.1 General 64
6.1.2 Verification of unreinforced masonry walls subjected to mainly vertical loading 64
6.1.3 Walls subjected to concentrated loads 67
6.2 Unreinforced masonry walls subjected to shear loading 70
6.3 Unreinforced masonry walls subjected to lateral loading 70

6.3.1 General 70
6.3.2 Walls arching between supports 72
6.3.3 Walls subjected to wind loading 73
6.3.4 Walls subjected to lateral loading from earth and water 73
6.3.5 Walls subjected to lateral loading from accidental situations 73
6.4 Unreinforced masonry walls subjected to combined vertical and lateral loading 74
6.4.1 General 74
6.4.2 Method using factor 74
6.4.3 Method using apparent flexural strength 74
6.4.4 Method using equivalent bending moment coefficients 74
6.5 Ties 74
6.6 Reinforced masonry members subjected to bending, bending and axial loading, or axial loading 75
6.6.1 General 75
6.6.2 Verification of reinforced masonry members subjected to bending and/or axial loading ... 76
6.6.3 Flanged Reinforced Members 78
6.6.4 Deep beams 80
6.6.5 Composite lintels 82
6.7 Reinforced masonry members subjected to shear loading 82
6.7.1 General 82
6.7.2 Verification of reinforced masonry walls subjected to horizontal loads in the plane of the wall 83
6.7.3 Verification of reinforced masonry beams subjected to shear loading 84
6.7.4 Verification of deep beams subjected to shear loading 85
6.8 Prestressed masonry 85
6.8.1 General 85
6.8.2 Verification of Members 86
6.9 Confined masonry 87
6.9.1 General 87
6.9.2 Verification of members 87

7 Serviceability Limit State 87
7.1 General 87
7.2 Unreinforced masonry walls 88
7.3 Reinforced masonry members 88
7.4 Prestressed masonry members 88
7.5 Confined masonry members 89
7.6 Walls subjected to concentrated loads 89

8 Detailing 89
8.1 Masonry details 89
8.1.1 Masonry materials 89
8.1.2 Minimum thickness of wall 89
8.1.3 Minimum area of wall 90
8.1.4 Bonding of masonry 90
8.1.5 Mortar joints 91
8.1.6 Bearings under concentrated loads 91
8.2 Reinforcement details 91
8.2.1 General 91
8.2.2 Cover to reinforcing steel 92
8.2.3 Minimum area of reinforcement 92
8.2.4 Size of reinforcing steel 93
8.2.5 Anchorage and laps 93
8.2.6 Restraint of compression reinforcing steel 97
8.2.7 Spacing of reinforcing steel 97
8.3 Prestressing details 98
8.4 Confined masonry details 98
8.5 Connection of walls 98
8.5.1 Connection of walls to floors and roofs 98
8.5.2 Connection between walls 99
8.6 Chases and recesses on walls 100
8.6.1 General 100

8.6.2 Vertical chases and recesses 101
8.6.3 Horizontal and inclined chases 101
8.7 Damp proof courses 102
8.8 Thermal and long term movement 102

9 Execution 102
9.1 General 102
9.2 Design of structural members 103
9.3 Loading of masonry 103

Annex A (informative) Consideration of partial factors relating to Execution 104

Annex B (informative) Method for calculating the eccentricity of a stability core 105

Annex C (informative) A simplified method for calculating the out-of-plane eccentricity of loading on walls 107

Annex D (informative) Determination of 3 and 4 111

Annex E (informative) Bending moment coefficients, ~2TM, in single leaf laterally loaded wall panels of thickness less than or equal to 250 mm 112

Annex F (informative) Limiting height and length to thickness ratios for walls under the serviceability limit state 117

Annex G (informative) Reduction factor for slenderness and eccentricity 119

Annex H (informative) Enhancement factor as given in 6.1.3 121

Annex I (informative) Adjustment of lateral load for walls supported on three or four edges subjected to out-of-plane horizontal loading and vertical loading 122

Annex J (informative) Reinforced masonry members subjected to shear loading: enhancement of fvd 123
