Foreword 4

NA.1 Scope 5

NA.2.1 General 5

NA.2.2 National provisions 6

1 General 6
1.1 Scope 6
1.2 Normative references 6
1.5 Design assisted by testing and measurements 6

4 Wind velocity and velocity pressure 6
4.1 Basis for calculation 6
4.2 Basic values 7
4.3 Mean wind 7
4.4 Wind turbulence 8
4.5 Peak velocity pressure 8

5 Wind actions 9
5.3 Wind forces 9

6 Structural factor cscd 9
6.1 General 9
6.3 Detailed procedure 9

7 Pressure and force coefficients 9
7.1 General 9
7.2 Pressure coefficients for buildings 10
7.4 Free-standing walls, parapets, fences and signboards 11
7.6 Structural elements with rectangular sections 11
7.7 Structural elements with sharp edged section 12
7.8 Structural elements with regular polygonal section 14
7.10 Spheres 14
7.11 Lattice structures and scaffoldings 14
7.13 Effective slenderness and end-effect factor 14

8 Wind actions on bridges 14
8.1 General 14
8.2 Choice of the response calculation procedure 15
8.3 Force coefficients 15
8.4 Bridge piers 15

Annex A (informative) Terrain effects 15

Annex B (informative) Procedure 1 for determining the structural factor cscd 16

Annex C (informative) Procedure 2 for determining the structural factor cscd 16

Annex D (informative) cscd values for different types of structures 16

Annex E (informative) Vortex shedding and aeroelastic instabilities 16

Annex F (informative) Dynamic characteristics of structures 16

NCI Annex NA.A (normative) Wind zone map 17

NA.A.1 General 17

NA.A.2 Influence of the altitude 17

NCI Annex NA.B (normative) Influence of terrain roughness, orography and temporary states on the wind actions 18

NA.B.1 Specification of the terrain categories 18

NA.B.2 Transitions between the terrain categories 19

NA.B.3 Gust velocity pressure for buildings and structural elements not susceptible to vibrations . 20

NA.B.3.1 Procedures for determining the gust velocity pressure 20

NA.B.3.2 Simplified gust velocity pressure assumptions for buildings with heights of up to 25 m above ground level 20

NA.B.3.3 Height-dependent gust velocity pressure for the normal case 21

NA.B.4 Influence of orography 23

NA.B.4.1 Determining the influence of orography 23

NA.B.4.2 Numerical calculation of the orography coefficients 23

NA.B.5 Reduction of the velocity pressure for temporary states 23

NCI Annex NA.C (normative) Determination of the structural factor and evaluation of the vibration susceptibility 25

NA.C.1 Determination of the structural factor 25

NA.C.1.1 General 25

NA.C.1.2 Wind turbulence 26

NA.C.1.3 Structural factor cscd 28

NA.C.1.4 Number of loads for dynamic response 28

NA.C.1.5 Service displacement and accelerations for serviceability assessments of a vertical structure 29

NA.C.2 Criterion for the susceptibility to vibrations 29

NCI Annex NA.D (normative) Vortex shedding 31

NCI Annex NA.E (informative) Aeroelastic instabilities 32

NA.E.1 Galloping and interference galloping 32

NA.E.2 Divergence and flutter 32

NA.E.2.1 General 32

NA.E.2.2 Divergence velocity 32

NDP Annex NA.F (normative) Dynamic characteristics of structures 35

NCI Annex NA.N (informative) Wind actions on bridges 36

NA.N.1 General 36

NA.N.2 Wind actions to be taken into account 36

NCI Annex NA.V (normative) Pressure coefficients for canopies 43

NCI Bibliography 45
