## Environmental damage limitation from fire-fighting water run-off

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Emission to the aquatic environment .....	2
4.1	Contamination pathways .....	2
4.2	Control of firefighting water runoff to surface water and ground water .....	3
4.3	Permanent or portable tanks are another option for firewater retention .....	4
5	Environmental damage limitation .....	4
5.1	Initial risk assessment .....	4
5.2	Risk reduction strategies .....	4
5.3	Firefighting tactics .....	5
5.4	Factors in assessing the volume of water runoff .....	6
6	Rules to design water basins .....	7
6.1	Characteristics to design the water basins .....	7
6.2	Common characteristics of water basins .....	8
6.3	Methods to define water basin capacity .....	9
Annex A (informative)	Example case histories .....	14
Annex B (informative)	Overview of water basin definition methods .....	17
Annex C (informative)	Assessing water runoff containment capacities in existing facilities and facilities under development using riskbased approach -- Australian method .....	19
Bibliography .....		22
