

ISO/TR 26368:2012-05 (E)

Environmental damage limitation from fire-fighting water run-off

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Emission to the aquatic environment	2
4.1 Contamination pathways	2
4.2 Control of firefighting water runoff to surface water and ground water	3
4.3 Permanent or portable tanks are another option for firewater retention	4
5 Environmental damage limitation	4
5.1 Initial risk assessment	4
5.2 Risk reduction strategies	4
5.3 Firefighting tactics	5
5.4 Factors in assessing the volume of water runoff	6
6 Rules to design water basins	7
6.1 Characteristics to design the water basins	7
6.2 Common characteristics of water basins	8
6.3 Methods to define water basin capacity	9
Annex A (informative) Example case histories	14
Annex B (informative) Overview of water basin definition methods	17
Annex C (informative) Assessing water runoff containment capacities in existing facilities and facilities under development using riskbased approach -- Australian method	19
Bibliography	22
