ISO 13099-1:2012-06 (E)

Colloidal systems - Methods for zeta-potential determination - Part 1: Electroacoustic and electrokinetic phenomena

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Termsanddefinitions 1
2.1 Electric double layer 1
2.2 Electrokinetic phenomena 2
2.3 Electroacoustic phenomena 4

3 Symbols 5

4 Theory: general comments 6

5 Elementary theories, Smoluchowski's limit for electrokinetics 7
5.1 General 7
5.2 Electrophoresis 7
5.3 Electroosmosis 8
5.4 Streaming current or potential 8
5.5 Sedimentation potential or current 8

6 Elementary theories, Smoluchowski's limit for electroacoustics 8
6.1 General 8
6.2 O'Brien's theory for dynamic electrophoretic mobility 9
6.3 Smoluchowski limit theory for dynamic electrophoretic mobility 9

7 Advanced theories 10

8 Equilibriumdilutionandothersamplemodifications 10

Annex A (informative) Electric double layer models 12

Annex B (informative) Surface conductivity 18

Annex C (informative) Debye length 20

Annex D (informative) Advanced electrophoretic theories 21

Annex E (informative) Advanced electroacoustic theories 24

Bibliography 26
