## Fire tests for building elements and components - Fire testing of service installations - Part 3: Single component penetration seals - Guidance on the construction and use of test configurations and simulated services to characterise sealing materials

---

<b>Contents</b>	<b>Page</b>
Foreword .....	iv
Introduction .....	v
1 Scope .....	1
2 Normative references .....	2
3 Terms and definitions .....	2
4 Test equipment .....	3
5 General performance criteria .....	3
6 Guidance on test configurations and procedures .....	4
7 Test procedures .....	4
7.1 Test configuration A -- Size of unsupported free area of penetration seal .....	5
7.2 Test configuration B -- Thermal diffusivity of the conductor / penetration .....	6
7.3 Test configuration C .....	7
7.4 Test configuration D -- When multiple simulated services are being tested .....	8
7.5 Test procedure E .....	8
7.6 Test procedure F .....	8
7.7 Test procedure G .....	9
7.8 Test procedure H .....	9
8 Deriving the field of application by judgemental analysis .....	9
8.1 Analysis using test configuration A .....	9
8.2 Analysis using test configuration B .....	9
8.3 Analysis using test configuration C .....	10
8.4 Analysis using test configuration D .....	10
9 Deriving the field of application by mathematical analysis .....	10
9.1 Use of the 3-D interpolation method to predict the extended field of application .....	10
Annex A (informative) Determining the extended field of application .....	12
Annex B (informative) Example of the application of the principles of 3-D interpolation to the establishment of the extended application of penetrating sealing system .....	13
Annex C (informative) 3-D interpolation method of analysis .....	16
