DIN EN 40-3-1:2013-06 (E)

Lighting columns - Part 3-1: Design and verification - Specification for characteristic loads

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Symbols 4

5 Basis of loads 5
5.1 Dead loads 5
5.2 Wind pressures 5
5.2.1 General 5
5.2.2 Reference wind pressure q(10) 6
5.2.3 Factor for column size 6
5.2.4 Factor for the dynamic behaviour of lighting columns, ... 6
5.2.5 Topography factor f 7
5.2.6 Exposure coefficient ce(z) 7
5.3 Shape coefficient 9
5.3.1 Shape coefficient for columns and brackets with circular cross-sections 9
5.3.2 Shape coefficient for columns and brackets with regular octagonal cross-sections 9
5.3.3 Shape coefficients for columns and brackets with other cross-sections 11
5.3.4 Shape coefficient for luminaires 11

6 Forces and moments 11
6.1 Forces due to wind pressure and dead load 11
6.1.1 Horizontal force on any part of the column shaft 11
6.1.2 Horizontal force on any part of the bracket projecting from the column 12
6.1.3 Forces on the luminaire 12
6.1.4 Forces due to dead loads 12
6.2 Moments due to wind pressure and dead loads 12
6.2.1 Bending moments acting on the column shaft and the bracket 12
6.2.2 Torsional moments acting on the column shaft due to wind loads 13

Annex A (normative) National wind and meteorological information 14
