

DIN EN 12620:2013-07 (E)

Aggregates for concrete

Contents		Page
Foreword		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	7
4	Geometrical requirements	9
4.1	General	9
4.2	Aggregate sizes	9
4.3	Grading	10
4.3.1	General	10
4.3.2	Coarse aggregates	11
4.3.3	Fine aggregates	12
4.3.4	All-in aggregates	12
4.3.5	Special use aggregates and declared grading categories	13
4.3.6	Grading of added filler	13
4.3.7	Natural graded 0/8 mm aggregates	13
4.4	Fines content	14
4.5	Fines quality	15
4.6	Particle shape of coarse and all-in aggregates	17
4.6.1	Flakiness index and shape index	17
4.6.2	Percentage of crushed or broken particles	19
4.6.3	Angularity of fine aggregates	19
4.7	Shell content of coarse and all-in aggregates	20
5	Physical requirements	20
5.1	General	20
5.2	Resistance to fragmentation	21
5.3	Resistance to wear	22
5.4	Particle density and water absorption	22
5.4.1	Particle density	22
5.4.2	Water absorption	23
5.5	Bulk density	23
5.6	Resistance to polishing for application in surface courses	23
5.7	Resistance to surface abrasion	23
5.8	Resistance to abrasion from studded tyres for application in surface courses	23
6	Chemical requirements	24
6.1	General	24
6.2	Petrographic description	24
6.3	Classification of the constituents of coarse recycled aggregates	24
6.4	Sulfur containing compounds	27
6.4.1	Acid-soluble sulfate	27
6.4.2	Total sulfur	27
6.4.3	Water soluble sulfate content of recycled aggregates	28
6.5	Chlorides	28
6.6	Carbonate content for concrete pavement surface courses of fine, and all-in aggregates	28
6.7	Other constituents	29
6.7.1	Constituents which alter the rate of setting and hardening of concrete	29
6.7.2	Constituents which affect the volume stability of air-cooled blast furnace slag	30

7	Durability	30
7.1	General	30
7.2	Magnesium sulfate soundness of coarse aggregates	30
7.3	Freeze - thaw resistance	31
7.3.1	Water absorption as a screening test for freeze-thaw resistance	31
7.3.2	Resistance to freezing and thawing	32
7.3.3	Resistance to freezing and thawing in the presence of salt (extreme conditions)	32
7.4	Volume stability - drying shrinkage	33
7.5	Alkali-silica reactivity	33
8	Evaluation of conformity	33
9	Designation	33
9.1	Designation and description	33
9.2	Additional information for the description of an aggregate	34
10	Marking and labelling	34
	their status in respect of the scope of the standard	35
	Annex B (informative) Guidance on the description of coarseness/fineness of fine aggregates	38
	Annex C (informative) Guidance on the effects of some chemical constituents of aggregates on the durability of concrete in which they are incorporated	39
C.1	Chlorides	39
C.1.1	Chlorides in natural aggregates	39
C.1.2	Chlorides in recycled aggregates	39
C.2	Sulfates	39
C.3	Alkali-silica reaction	40
C.3.1	Alkali-silica reaction with natural aggregates	40
C.3.2	Alkali-silica reaction with recycled aggregates (including manufactured glass)	40
C.4	Constituents affecting the surface finish of concrete	40
C.5	Constituents affecting the setting and hardening of concrete	41
C.6	Constituents of air-cooled blastfurnace slag	41
	Annex ZA (informative) Clauses of this European Standard addressing the provisions of the EU Construction Products Directive	42
ZA.1	Scope and relevant characteristics	42
ZA.2	Procedures for attestation of conformity of aggregates and fillers	45
ZA.2.1	System(s) of attestation of conformity	45
ZA.2.2	EC Certificate Declaration of conformity	47
ZA.3	CE marking and labelling	49
	Bibliography	56
