

ISO/TR 12930:2014-04 (E)

Seismic design examples based on ISO 23469

Contents		Page
Foreword		vi
Introduction		vii
1	Scope	1
2	Purpose and policy of collecting design examples	1
2.1	Purpose of collecting well-chosen examples	1
2.2	Concept and policy of choosing and composing	2
2.3	Development and result	2
2.4	General conclusion of TR12930 obtained through its development	2
2.5	Editors, authors and reviewers	3
2.5.1	Editors	3
2.5.2	Authors	3
2.5.3	Reviewers	4
3	Assessment for conformity with ISO 23469	4
4	First stage of specifying seismic actions - Determination of site-specific earthquake ground motions demonstrated by design examples	4
4.1	General	5
4.1.1	Methodology for empirical method in deterministic approach and examples	5
4.1.2	Examples	6
4.2	Site-specific seismic hazard analysis evaluation	7
4.2.1	Probabilistic approach- Probabilistic seismic hazard analysis with focus on Fourier amplitude and group delay time	8
4.2.1.1	Outline	8
4.2.1.2	Evaluation of Site Amplification Factor	9
4.2.1.3	Earthquake scenarios and probability of occurrence	10
4.2.1.4	Evaluation of Fourier amplitude spectra	11
4.2.1.5	Evaluation of uniform hazard Fourier spectrum	12
4.2.1.6	Evaluation of ground motion time history	13
4.2.1.7	Example of application	13
4.2.2	Site-specific approach on earthquake motions probabilistically evaluated in a LNG tank design considering a specific active fault	18
4.2.2.1	General procedure and design example	18
4.2.3	Deterministic approach - Theoretical ground motion estimation based on hypothetical scenario earthquakes	21
4.2.3.1	Methodology for theoretical ground motion estimation	21
4.2.3.2	Recipe for strong ground motion estimation	23
4.2.3.3	Sedimentary structure model	26
4.2.3.4	Examples of strong ground motion estimation	28
4.2.4	Deterministic approach - Ground motion estimation based on semi empirical approach ..	29
4.2.4.1	Outline	29
4.2.4.2	Evaluation of site amplification factor	31
4.2.4.3	Evaluation of strong ground motion	34
4.2.4.4	Example of application	39
4.3	Determination of earthquake ground motion to be used in site response analysis	43
4.3.1	Empirical and site simplified analysis approach	43
4.3.1.1	Simplified procedure of Seismic Deformation Method	43
4.3.1.2	Natural period of an example ground	45
4.3.1.3	Ground displacement	46

5	Second stage of specifying seismic actions. Seismic evaluation of geotechnical works demonstrated by design examples	47
5.1	Demonstrations of seismic evaluation using simplified and detailed analyses	47
5.1.1	Simplified static and detailed dynamic analyses in design example of gravity quay wall in port	47
5.1.1.1	Purpose and functions	47
5.1.1.2	Performance objectives for seismic design	47
5.1.1.3	Reference earthquake motions	48
5.1.1.4	Performance criteria and limit states	48
5.1.1.5	Specific issues related to geotechnical works	50
5.1.1.6	Procedure for determining seismic actions	50
5.1.1.7	Ground failure and other geotechnical hazards	52
5.1.1.8	Spatial variation	55
5.1.1.9	Types and models of analysis	55
5.1.1.10	Simplified equivalent static analysis	57
5.1.1.11	Detailed equivalent static analysis	61
5.1.1.12	Simplified dynamic analysis	61
5.1.1.13	Detailed dynamic analysis	61
5.1.2	Highway bridge pile foundation	64
5.1.2.1	Outline of the highway bridge	64
5.1.2.2	Seismic performance requirements	66
5.1.2.3	Input ground motions used in seismic design and analysis model of the entire bridge	68
5.1.2.4	Seismic design of foundations	71
5.1.3	Assessment of seismic performance of the Sutong Bridge, a long cable-stayed bridge (Pile foundation)	79
5.1.3.1	Bridge outline	79
5.1.3.2	Design seismic ground motion and seismic performance	80
5.1.3.3	Seismic performance of foundations	82
5.1.4	Earth fill dam	86
5.1.4.1	Purpose and functions	86
5.1.4.2	Performance objectives for seismic design	87
5.1.4.3	Procedure for determining seismic actions	88
5.1.4.4	Soil properties and models for detailed dynamic analysis	90
5.1.4.5	Simplified equivalent static analysis: Slip analysis results;	93
5.1.4.1	Detailed dynamic analysis: Results of FEM dynamic analysis;	94
5.1.5	Gravity sea wall as coastal structure	97
5.1.5.1	Purpose and functions	97
5.1.5.2	Performance objectives for seismic design	97
5.1.5.3	Reference earthquake motions	98
5.1.5.4	Performance criteria and limit states	98
5.1.5.5	Specific issues related to geotechnical works	100
5.1.5.6	Procedure for determining seismic actions	100
5.1.5.7	Earthquake ground motions	100
5.1.5.8	Seismic coefficient determinations	102
5.1.5.9	Effects of soil liquefaction	105
5.1.5.10	Spatial variation	107
5.1.5.11	Procedure for specifying seismic actions	107
5.2	Demonstrations evaluating and designing for ground displacement effects	111
5.2.1	Pile foundations of railway bridges	111
5.2.1.1	Outline of railway bridge pier	111
5.2.1.2	Seismic performance requirements	112
5.2.1.3	Reference earthquake ground motions	115
5.2.1.4	Site response analysis and assessment of liquefaction potential	117
5.2.1.5	Procedure for specifying seismic actions on piles	119
5.2.1.6	Simplified equivalent static analysis - Seismic Deformation Method	120
5.2.2	Design and actual performance of pile foundation of high R/C smokestack on soft ground	125
5.2.2.1	General remarks	125
5.2.2.2	Purpose and functions	126
5.2.2.3	Performance objectives for seismic design and reference earthquake motions	126
5.2.2.4	Performance criteria and limit states	127

5.2.2.5	Policy of determining seismic actions on superstructure and foundation for design	129
5.2.2.6	Features of smokestack and geotechnical characterization	131
5.2.2.7	Models of simplified and detailed dynamic analyses for specifying seismic actions	135
5.2.2.8	Results of detailed dynamic analyses	138
5.2.2.9	Verification of models based on vibration tests	139
5.2.2.10	Actual seismic behaviour of ground and smokestack	142
5.2.2.11	Verification of models based on strong motion records	145
5.2.3	Shallow immersed rectangular tunnel in soft soils	150
5.2.3.1	Thessaloniki immersed roadway tunnel	150
5.2.3.2	Behaviour of longitudinal underground structures under seismic loading	151
5.2.3.3	Analysis methods	152
5.2.3.4	Determination of input motion	153
5.2.3.5	Simplified equivalent static analysis	154
5.2.3.6	Detailed equivalent static analysis	156
5.2.3.7	Detailed full dynamic analysis	158
5.2.3.8	Results and discussion	159
5.3	Demonstrations evaluating and designing for liquefaction effects	161
5.3.1	Evaluation of 3D SSI effects of pile foundation of LNG tank model by detailed dynamic analyses	161
5.3.1.1	Problem description	161
5.3.1.2	Results of analyses and discussion	162
5.3.1.3	Consideration of results into design	166
5.3.2	Evaluation of 3-D effects of lattice-arranged numerous piles by detailed dynamic analyses	166
5.3.2.1	Objectives	166
5.3.2.2	Results of analyses and discussion	166
5.3.3	Evaluation of pile-volume effects of a huge number of piles by detailed dynamic analyses	169
5.3.3.1	Introduction	169
5.3.3.2	Results of analyses and discussion	169
5.3.3.3	Consideration of results into design	170
5.4	Demonstrations evaluating and designing for fault displacement effects	171
5.4.1	Seismic design abstract of road embankment taking account of surface fault rupture	171
5.4.1.1	Purpose and functions	171
5.4.1.2	Performance objectives and ground motions for seismic design	172
5.4.1.3	Performance criteria	172
5.4.1.4	Procedure for determining seismic actions	172
5.4.1.5	Ground failure and other geotechnical hazards	173
5.4.1.6	Types of analysis	174
5.4.1.7	Simple static analysis	174
5.4.1.8	Detailed dynamic analysis	174
5.4.2	Shield tunnel subject to fault displacements (Detailed analysis)	176
5.4.2.1	General remarks	176
5.4.2.2	Soil conditions and shield tunnel	176
5.4.2.3	Estimation of fault displacement at base layer	176
5.4.2.4	Method of analysis and modelling nonlinear behaviour of soil	178
5.4.2.5	Results of analyses	180
5.4.2.6	Influence of fault displacement to tunnel	183
5.4.3	Design considerations for a water pipeline access tunnel subject to earthquake hazards	184
5.4.3.1	Purpose and functions	184
5.4.3.2	Project description	184
5.4.3.3	Performance objectives and reference earthquake design levels	186
5.4.3.4	Performance criteria	187
5.4.3.5	Specific issues related to geotechnical works	187
5.4.3.6	Evaluation of earthquake ground motions and fault displacements	188
5.4.3.7	Simplified equivalent static analysis	192
Annex A (informative) Conformity with provisional sentences in ISO 23469		201
A.1	General	201
