ISO 9276-2:2014-05 (E)

Representation of results of particle size analysis - Part 2: Calculation of average particle sizes/diameters and moments from particle size distributions

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Definitions,symbolsandabbreviatedterms 1

4 The moment-notation 3
4.1 Definition of moments according to the moment-notation 3
4.2 Definition of mean particle sizes according to the moment-notation 4
4.3 Calculation of moments and mean particle sizes from a given size distribution 7
4.4 Variance and standard deviation of a particle size distribution 9
4.5 Calculation of moments and mean particle sizes from a lognormal distribution 9
4.6 Calculation of volume specific surface area and the Sauter mean diameter 10

5 The moment-ratio-notation 10
5.1 Definition of moments according to the moment-ratio-notation 10
5.2 Definition of mean particle sizes according to the moment-ratio-notation 11
5.3 Calculation of mean particle sizes from a given size distribution 13
5.4 Variance and standard deviation of a particle size distribution 14
5.5 Relationships between mean particle sizes 15
5.6 Calculation of volume specific surface area and the Sauter mean diameter 16

6 Relationship between moment-notation and moment-ratio-notation 16

7 Accuracy of calculated particle size distribution parameters 18

Annex A (informative) Numerical example for calculation of mean particle sizes and standard deviation from a histogram of a volume based size distribution 19

Annex B (informative) Numerical example for calculation of mean particle sizes and standard deviation from a histogram of a volume based size distribution 22

Annex C (informative) Accuracy of calculated particle size distribution parameters 25
