ISO 27891:2015-03 (E)

Aerosol particle number concentration - Calibration of condensation particle counters

Contents

Page

7 Calibration using a CPC as reference instrument 28
7.1 Overview of the setup and calibration procedure 28
7.2 Preparation 31
7.2.1 General preparation 31
7.2.2 Primary aerosol 31
7.2.3 Other equipment 31
7.2.4 DEMC 31
7.2.5 Reference CPC 32
7.2.6 Test CPC 33
7.2.7 Check of the complete setup 33
7.3 Calibration procedure of detection efficiency 35
7.3.1 General 35
7.3.2 DEMC diameter adjustment 35
7.3.3 Primary aerosol adjustment 36
7.3.4 Splitter bias measurement 36
7.3.5 Test CPC efficiency measurement 37
7.3.6 Measurement of different particle concentrations 38
7.3.7 Measurement of different sizes 38
7.3.8 Repetition of first measurement point 38
7.3.9 Preparation of the calibration certificate 38
7.4 Measurement uncertainty 38
7.4.1 General 38
7.4.2 Particle size 39
7.4.3 Detection efficiency 39
7.4.4 Particle number concentration 40

8 Reporting of results 40

Annex A (informative) CPC performance characteristics 42

Annex B (informative)EffectofparticlesurfacepropertiesontheCPCdetectionefficiency 51

Annex C (informative)Examplecalibrationcertificates 53

Annex D (normative)CalculationoftheCPCdetectionefficiency 62

Annex E (informative) Traceability diagram 73

Annex F (informative) Diluters 75

Annex G (normative) Evaluation of the concentration bias correction factor between the inlets of the reference instrument and test CPC 78

Annex H (informative) Extension of calibration range to lower concentrations 83

Annex I (informative)Exampleofadetectionefficiencymeasurement 90

Annex J (normative)Volumetricflowratecalibration 106

Annex K (normative) Testing the charge conditioner and the DEMC at maximum particle number concentration 108

Annex L (informative) A recommended data recording method when using a reference FCAE 109

Annex M (informative)Uncertaintyofdetectionefficiencyduetoparticlesizeuncertainty 111

Annex N (informative) Application of calibration results 113
